The Beaver Pond:

The Beaver Pond Alvin R. Tresselt, 1970 The beavers dam a stream and create a pond which is valuable to many creatures

A Year at a Beaver Pond Al Cornell, 2024-01-02 A beaver pond that had gone undetected because of the tall wetland vegetation became visible after a late winter snowfall flattened that vegetation It had been built the previous summer and fall Sally and I were driving down the road a mile from our house when we observed it and watched a bald eagle go into a sudden stoop toward a wood duck The frightened duck shot down over the dam and escaped downstream A few days later I entered a small blind on the edge of the pond 45 minutes before sunrise That quickly grew from a session to an obsession and then to A Year at a Beaver Pond Dozens of pages of field notes and thousands of photos provided the foundation for a story With this book you too can sit by the dam and envision what transpires at that tenth of an acre pond Though small that mini ecosystem adds dramatically to the adjacent habitat In the sediment beneath the pond a myriad of insect larvae feed on deposited organic matter Most of them at some stage in their metamorphosis become food for fish birds raccoons or larger insects In turn fish become food for larger fish birds and mammals This book is the product of observing insects toads and trout along with 61 species of birds and nine species of mammals that were drawn to the footprint of the pond By the footprint I mean the pond the dam and the vegetation growing at the immediate edge of the pond Otter were elusive until one finally decided to frolic in the magical early morning light A beaver even used a rock for a dam repair Warblers swallows flycatchers and waxwings fed on insects from tiny moth flies to long legged crane flies The trout feeding activity peaked when dozens were jumping during the midge hatch A raccoon brought her young ones to sift through the sediments for edible morsels Sandpipers and snipe probed the shallow water and the mudflats for earthworms and larvae When mudflats were exposed mink a cottontail and many birds used them for travel and feeding The little remnant willow near the blind was searched by small birds used as a landing spot by those feeding on flighted insects and used by kingfishers and herons that fed on trout Jewelweed blooming on the dam enticed hummingbirds and bumblebees The ecological wonder of beaver ponds helps establish a sense of the value of beavers By gradually overcoming the bias that they are just a nuisance perhaps at some point we will be able to tolerate half of the population that inhabited this continent before the massive fur harvest decimated them
