Although short-sighted it is believed beavers can see colour. They also have a third, clear eyelid, (nictating membrane) which allows them to see underwater.

Vital for finding food, identifying family members and detecting danger, a beaver's sense of smell is it's most important and one of its strongest senses.

Beavers teeth are reinforced with iron which gives them their distinctive orange colour and allows them to gnaw through wood.

An excellent sense of hearing both on land and underwater allows them to identify predators and family. The inner ear is full of dense fluffy hairs which trap air and prevent water from getting in.

Beavers have 2 layers of fur. A short dense underfur which acts as an insulator and an outer layer of longer guard hairs which repel water.

Beaver fossils and other archaeological remains have been discovered at 104 different sites across Britain.

Up to
1.5 feet
(0.5m)

Large, flat and scaly tail mainly used as a rudder when swimming. Also used to slap the water's surface to deter predators and notify other beavers of danger.

With a lung capacity roughly 3 times that of an adult human beavers can remain underwater for up to 15 minutes at a time.

Up to
4.3 feet (1.3m)

Hand-like forepaws allow beavers to easily grasp food and materials. But unlike us it is the outer digit of the hand which is opposable (imagine your thumb and pinky swapped places).

Large webbed hind feet (up to 7 inches) which are mainly used to propel beavers through water up to speeds of 5mph.

Out of 4,660 known species of rodent, the beaver is second only to the Capybara from South America in size.

28 European countries have reintroduced beavers since the 1920s. The European population is estimated at 1.5 million individuals but Britain only has an estimated 2,000.

The Beaver

Adam Reingold

The Beaver:

The Beaver James P. Delgado, 1993 The Hudson's Bay Company's paddle steamship the Beaver was the first and for many years the only steam vessel on the coast of British Columbia. In 1888 her long and successful career came to a sad end on the rocks of Prospect Point but she remains an object of fascination to divers. This is the biography of the Beaver, a ship that made an unparalleled contribution to the history of the west coast. The Beaver Dietland Müller-Schwarze, Lixing Sun, 2003 Beavers can and do dramatically change the landscape. The beaver is a keystone species; their skills as foresters and engineers create and maintain ponds and wetlands that increase biodiversity, purify water, and prevent large-scale flooding. Biologists have long studied their daily and seasonal routines, family structures, and dispersal patterns. As human development encroaches into formerly wild areas, property owners and government authorities need new nonlethal strategies for dealing with so-called nuisance beavers. At the same time, the complex behavior of beavers intrigues visitors at parks and other wildlife viewing sites because it is relatively easy to observe. In an up-to-date, exhaustively illustrated and comprehensive book on beaver biology and management, Dietland Müller-Schwarze and Lixing Sun gather a wealth of scientific knowledge about both the North American and Eurasian beaver species. The Beaver is designed to satisfy the curiosity and answer the questions of anyone with an interest in these animals, from students who enjoy watching beaver ponds at nature centers to homeowners who hope to protect their landscaping. Photographs taken by the authors document every aspect of beaver behavior and biology, the variety of their constructions, and the habitats that depend on their presence. Beaver facts: Just as individual beavers shape their immediate surroundings, so did the distribution of beavers across North America influence the paths of English and French explorers and traders. As a result of the fur trade, beavers were wiped out across large areas of the United States. Reintroduction efforts led to the widespread establishment of these resilient animals, and now they are found throughout North America, Europe, and parts of the southern hemisphere. Beaver meadows provided early settlers with level, fertile pastures and hayfields. Based on the fossil record, the smallest extinct beaver species were the size of a muskrat, and the largest may have reached the size of a black bear, five to six times as large as today's North American beavers. Beaver gnawed wood has been found alongside the skeleton of a mastodon. Some beavers remain in the home lodge for an extra year to assist their parents in raising younger siblings. They feed, groom, and guard the newborn kits. In 1600, beaver ponds covered eleven percent of the upper Mississippi and Missouri Rivers watershed. Restoring only 3 percent of the original wetlands might suffice to prevent catastrophic floods such as those in the early 1990s. *Bears in the Beaver's Pond* Earl J. Roberts, 2020-01-21 If you like animals, you'll enjoy this book. If you wonder where we've been or where we're going in America, you'll profit from it. Roger Alestrom: A good read for young or old for different reasons. C. K. Chesterson: One may think Bears is just a delightful tale, but it is more than that; it is a provocative one. Mrs. Wilbur Kozinski: I wish I had known what I learned in Bears in the Beaver's Pond when I was still in high school. Ben Stowe *The Beaver's Lodge* Adam

Reingold,2009-08-01 Explore the remarkable homes built by animal architects Beavers create complex structures to meet their needs just like people do Each beaver family builds a dam in a river or creek in order to make a pond The furry engineers then build a lodge out of branches logs and mud in the middle of the pond They stay safe and warm in a large room above the water in their lodge Jaw dropping photos a habitat map and fascinating information will captivate young readers as they learn about these truly spectacular animal towns **The Legend of the Beaver's Tail** Stephanie Shaw,2015-04-01

Long ago Beaver did not look like he does now Yes he had two very large front teeth but his tail was not wide and flat It was thick with silky fur Vain Beaver is inordinately proud of his glorious tail When he s not bragging about his tail Beaver spends his time grooming it while the other woodland creatures go about their business of finding food and shelter for their families Eventually Beaver s boasting drives away his friends and he is left on his own But when his tail is flattened in an accident of his own making Beaver learns to value its new shape and seeks to make amends with his friends Based on an Ojibwe legend
