The Use of Small-Format Aerial Photography in Aquatic Macrophyton Sampling BW. Breedlove, WM. Dennis, 1984 Standard 35 and 70 mm low altitude aerial photography provides a low cost effective means for sampling aquatic macrophyte communities Both color and color infrared CIR film have been used successfully A haze filter should be used with color film and a Wratten 12 or 15 filter should be used with color infrared Adequate water penetration is provided by color film in waters with high turbidity

and suspended matter while CIR film may be preferable in low turbidity waters Ground coverage tables provide scale and areal coverage in tabular form at various altitudes focal lengths and appropriate time intervals to ensure 60% stereo overlap Various cameras and lens combinations can be used however a 28 mm lens with the 35 mm single lens reflex SLR camera and a 40 or 80 mm lens with a 70 mm camera have proven very effective and allow maximum areal coverage at lower altitudes This flexibility allows photo missions to be flown below cloud bases in less than optimum conditions while still obtaining good quality photography

Drones George Dekoulis, 2018-06-27 Drone technologies have constantly been developing for over 100 years The latest models exhibit a previously unseen set of specifications available to the end users The collective effort of distinguished international researchers within the field of drone technologies has been incorporated into this textbook suitable to the broader audience The book has been edited by Prof George Dekoulis Aerospace Engineering Institute AEI Cyprus an expert on state of the art implementations of reconfigurable space engineering systems The book consists of four main sections namely Introduction Drone History Drone Design and Drone Applications We hope this book will be beneficial to professionals researchers and academicians and moreover to inspire the younger generations into pursuing relevant academic studies and professional careers within the drone industry
