

The Launching of Modern American Science, 1846–1876

DURING ITS FIRST TWO HUNDRED YEARS, American science was the domain of a scattering of independent amateurs. But by the mid-nineteenth century the ideas, needs, and directions of these scientists had begun to coalesce, and the organized, truly national, and highly professional community that we know today was established. The noted historian and biographer Robert V. Bruce here provides the most detailed and comprehensive study to date of the three decades, 1846–1876, which gave birth to modern American science.

"For readers born since the 1930s, who have grown up assuming the United States leads the world in science, *The Launching of Modern American Science, 1846–76* will come as something of a shock. It shows that little over a century ago the American scientific community was small, mediocre, and unpromising. . . . [Bruce] has provided a wealth of information on the people and institutions of mid-19th-century American science."

—The New York Times Book Review

"The emphasis is on *American* in this superb study of the dawn of science and technology in the United States. . . . [Bruce's] premier focus in this and earlier books is mid-to-late-19th-century America, and one feels in the presence of a master who creates a reality of time and place that is breathtaking."

—Kirkus Reviews

Robert V. Bruce received a degree in mechanical engineering from the University of New Hampshire and earned his Ph.D. degree in history at Boston University. A Professor Emeritus at Boston University, he has been named a Guggenheim Fellow, a Fellow of the Henry E. Huntington Library, and a Fellow of the Society of American Historians.
