Robert McMurdy

The Letter On The Tree:

The Letter Tree Rachel Fordham, 2023-10-31 Romeo and Juliet meets You've Got Mail in 1920s New York when hidden letters change everything for two lost souls and the community around them Seven years ago a letter left inside a tree brought Laura Bradshaw an anonymous friend who helped her navigate the tragic loss of her mother and gave her something to look forward to despite the overbearing hand of her father Life would be far bleaker if not for her beloved Letter Tree her dear friend and her secret trips to the Buffalo Zoo But even these rays of light are threatened when her father decides to play matchmaker in order to further his business goals When Isaac Campbell learns that his letter friend is destined to court another he balks at the suggestion and begs her to break her rule of namelessness and meet him Her words have endeared her to him he's ready to fall at her knees and beg her to choose him that is until he sees her face The stranger he's become so attached to is not a stranger but the only daughter of his family's sworn enemy Can the grown children of feuding parents bridge the chasm between them Or is the divide too deep and too wide Historical romance with a forbidden love story Stand alone novel set in the 1920s Includes discussion questions for book clubs

Morphology and Computation Richard William Sproat, 1992 This book provides the first broad yet thorough coverage of issues in morphological theory It includes a wide array of techniques and systems in computational morphology including discussion of their limitations and describes some unusual applications Sproat motivates the study of computational morphology by arguing that a computational natural language system such as a parser or a generator must incorporate a model of morphology He discusses a range of applications for programs with knowledge of morphology some of which are not generally found in the literature Sproat then provides an overview of some of the basic descriptive facts about morphology and issues in theoretical morphology and lexical phonology as well as psycholinguistic evidence for human processing of morphological structure He takes up the basic techniques that have been proposed for doing morphological processing and discusses at length various systems such as DECOMP and KIMMO that incorporate part or all of those techniques pointing out the inadequacies of such systems from both a descriptive and a computational point of view He concludes by touching on interesting peripheral areas such as the analysis of complex nominals in English and on the main contributions of Rumelhart and McClelland's connectionism to the computational analysis of words
