The Life Of Birds The Weidenfeld And Nicolson Natural History:

The Natural History of Edward Lear, New Edition Robert McCracken Peck, 2021-04-13 Edward Lear is well known as the brilliant writer of nonsense poetry children's books and travel books who popularized the limerick and wrote verses such as *The Owl and the Pussycat*. But few people are aware that Lear was one of the most talented and accomplished painters of natural history subjects in the nineteenth century and worked with British scientists, collectors, and publishers to make Britain the nexus for scientific investigation and its circulation. One of the best ornithological artists of his generation, Lear published his first book, a monograph on the parrot family, at age 18 and established a format that would be followed by decades by such publishers as John Gould, with whom he worked closely and often anonymously. Over his career, Lear produced a multitude of drawings of birds and mammals from around the world for scientific publications, public institutions, and individual patrons, not just of English species but of birds and mammals from Australia, New Zealand, and the Americas. He is also the Lear in the name of the rare species, Lear's Macaw. In this book, Peck has assembled the first comprehensive view of this important part of Lear's career. Featuring over 200 illustrations and a foreword by Sir David Attenborough, the book also examines the influence Lear had on modern artists such as Walton Ford and Tony Foster. This new edition includes a new chapter that addresses Lear's continued fascination with wildlife and the natural world after giving up his career as a scientific illustrator and his fascination with domestic pets from his own beloved cat, which he cartooned repeatedly, to the portraits of dogs owned by his family and friends, alongside thirteen never before published illustrations, including fully finished watercolors, rough preliminary sketches, and whimsical cartoons. *Headless Males Make Great Lovers* Marty Crump, 2024-05-31 The natural world is filled with diverse, not to mention quirky and odd animal behaviors. Consider the male praying mantis that continues to mate after being beheaded, the spiders, insects, and birds that offer gifts of food in return for sex, the male hip pocket frog that carries his own tadpoles, the baby spiders that dine on their mother, the beetle that craves excrement, or the starfish that sheds an arm or two to escape a predator's grasp. *Headless Males Make Great Lovers* and *Other Unusual Natural Histories* celebrates the extraordinary world of animals with essays on curious creatures and their amazing behaviors. In five thematic chapters, Marty Crump, a tropical field biologist well known for her work with the reproductive behavior of amphibians, examines the bizarre conduct of animals as they mate, parent, feed, defend themselves, and communicate. Crump's enthusiasm for the unusual behaviors she describes, from sex change and free love in sponges to aphrodisiac concoctions in bats, is visible on every page, thanks to her skilled storytelling, which makes even sea slugs, dung beetles, ticks, and tapeworms fascinating and appealing. Steeped in biology, *Headless Males Make Great Lovers* points out that diverse and unrelated animals often share seemingly bizarre behaviors. Evidence, Crump argues, that these natural histories, though outwardly weird, are successful ways of living. Illustrated throughout and filled with vignettes of personal and scientific interest, *Headless Males Make Great Lovers* will enchant the general reader with its tales of blood-squirting, horned

lizards and intestine ejecting sea cucumbers all in the service of a greater appreciation of the diversity of the natural histories of animals *Catalogue of the Library of the Museum of Comparative Zoology, Harvard University* Harvard University. Museum of Comparative Zoology, 1976 Current Ornithology D.M. Power, 2013-06-29 This edited series has three principal goals The first is to provide information in a relatively concise way for researchers needing an over view of specific disciplines The second is to provide an update on specific schools of thought bringing together ideas from colleagues whose works often appear in a variety of journals And the third is to stimulate and suggest directions for new research Volume 6 continues the tradition established by the previous editor and editorial board in providing new information updating our understanding of specific disciplines and stimulating new research In the first chapter Randall Breitwisch examines mortality patterns and sex ratios in monogamous birds He argues that there are many more components to measuring parental investment than are often realized our knowledge is weak in several areas Understanding the evolution of mating systems depends on better distinguishing the different intensities of natural selection that operate on males and females Gregory Butcher and Sievert Rohwer develop a framework for assessing the role of colorfulness in birds They propose several hypotheses to test and advocate evaluating more than one hypothesis at a time Future work on the evolution of distinctive coloration and of sexual and age dimorphism must take these ideas into account **Ornithology, Evolution, and Philosophy** Jürgen Haffer, 2007-11-19 This book is the first detailed biography of Ernst Mayr He was an architect of the Synthetic Theory of Evolution and the greatest evolutionary biologist since Charles Darwin He is one of the most widely known biologists of the 20th century **Peculiar Penguins and Funny Looking Frogs** Allyson Shepard Bailey, 2012-08-23 Have you ever wondered why some animals look or behave the way they do Peculiar Penguins and Funny Looking Frogs answers some of those questions Drawing on information from many different scientific disciplines and expert opinions from leading authorities we travel back through evolution to learn about the forces that shaped some of the creatures that share our world No special training required Anyone with an interest in wildlife and evolution should find this book interesting and entertaining The British National Bibliography Arthur James Wells, 1995 *Consuming Books* Stephen Brown, 2006-04-18 Big name contributors such as Malcolm McDonald Julia Kirby and Morris Holbrook First book to focus on marketing in the publishing industry Stephen Brown is a well known name in this sphere of marketing **An Environmental History of Wildlife in England 1650 - 1950** Tom Williamson, 2013-12-05 Choice Outstanding Academic Title 2014 While few detailed surveys of fauna or flora exist in England from the period before the nineteenth century it is possible to combine the evidence of historical sources ranging from game books diaries churchwardens accounts and even folk songs and our wider knowledge of past land use and landscape with contemporary analyses made by modern natural scientists in order to model the situation at various times and places in the more remote past This timely volume encompasses both rural and urban environments from 1650 to the mid twentieth century drawing on a wide variety of social

historical and ecological sources It examines the impact of social and economic organisation on the English landscape biodiversity the agricultural revolution landed estates the coming of large scale industry and the growth of towns and suburbs It also develops an original perspective on the complexity and ambiguity of man animal relationships in this post medieval period

The Woodhen Clifford Frith, 2013-06-12 This book tells the fascinating success story of saving the flightless Woodhen of Lord Howe Island This unique large rail an iconic and highly endangered Australian bird was at the very brink of extinction with just 15 individuals found in 1980 when bold and risky actions were taken to save it The book begins with the discovery and ecology of Lord Howe Island It then details the history of the Woodhen its place among the rails and their evolution of flightlessness the planning implementation and trials tribulations and successes of the captive breeding programme and the way in which the wild population recovered The ecology behaviour and breeding biology of this unique flightless island rail are also discussed The text is accompanied by numerous photographs and drawings This is a story of survival yet the bird remains highly endangered as it is under constant potential threat which could tip it over the brink and to extinction The Woodhen provides gripping insights into the potential for both losing and saving vertebrate species Winner of a 2014 Whitley Awards Certificate of Commendation for Historical Zoology
