International Conference on P2P Parallel Grid Cloud and Internet Computing held on November 8 10 2017 in Barcelona Spain These computing technologies have rapidly established themselves as breakthrough paradigms for solving complex problems by enabling the aggregation and sharing of an increasing variety of distributed computational resources at large scale Grid Computing originated as a paradigm for high performance computing offering an alternative to expensive supercomputers through different forms of large scale distributed computing while P2P Computing emerged as a new paradigm after client server and web based computing and has shown to be useful in the development of social networking B2B Business to Business B2C Business to Consumer B2G Business to Government B2E Business to Employee and so on Cloud Computing has been defined as a computing paradigm where the boundaries of computing are determined by economic rationale rather than technical limits Cloud computing has quickly been adopted in a broad range of application domains and provides utility computing at large scale Lastly Internet Computing is the basis of any large scale distributed computing paradigm it has very rapidly developed into a flourishing field with an enormous impact on today's information societies serving as a universal platform comprising a large variety of computing forms such as Grid P2P Cloud and Mobile computing The aim of the book *Advances on P2P Parallel Grid Cloud and Internet Computing* is to provide the latest findings methods and development techniques from both theoretical and practical perspectives and to reveal synergies between these large scale computing paradigms

The Smart Grid Clark W. Gellings, 2020-12-17 The power system has often been cited as the greatest and most complex machine ever built yet it is predominantly a mechanical system Technologies and intelligent systems are now available that can significantly enhance the overall functionality of power distribution and make it ready to meet the needs of the 21st century This book explains how sensors communications technologies computational ability control and feedback mechanisms can be effectively combined to create this new continually adjusting smart grid system It provides an understanding of both IntelliGridSM architecture and EnergyPortSM as well as how to integrate intelligent systems to achieve the goals of reliability cost containment energy efficiency in power production and delivery and end use energy efficiency

The Economics of Conservation Programs Franz Wirl, 2012-12-06 Demand side management DSM is one of the most topical issues in regulating electric utilities both in the United States and internationally What is DSM It consists of various measures at the level of demand households commerce industry others which are at least partially financed by electric utilities and which should either conserve energy or reduce the peak load The practice of DSM originates from The Public Utility Regulatory Policy Act of 1978 PURPA that provided the political and legal framework to set energy conservation as a national goal which encouraged regulatory commissions to initiate utility conservation programs see e.g. Nowell Tschirhart 1990 and Fox Penner 1990 Moreover integrated resource planning which must account for DSM on a level playing field with supply is written into the 1992 Energy Policy Act as the U.S. Government's preferred method of electric power planning Although PURPA set energy conservation as a national priority its implementation was left to the states with

the consequence of considerable differences concerning efforts and rules By 1993 16 states had already implemented integrated resource planning 9 were in the process of doing so and further 9 considered implementation EPRI 1993b Due to the Clean Air Act of 1990 24 states are considering to include external costs in integrated resource planning
