Fluid Arguments Char Miller, 2015-11-01 Water or the lack of it has

shaped the contours of the American West and continues to dominate the region's development. From the incursions of the Spanish conquistadores to the dams of the New Deal era, humans have sought water in these arid lands as the key to survival and success. And as the West becomes more urbanized, water is an issue as never before. This book sets contemporary and often bitter debates over water in their historical contexts by examining some of the most contentious issues that have confronted the region over five centuries. Seventeen contributors representing history, geography, ethnography, political science, law, and urban studies provide an interdisciplinary perspective on the many dimensions of water in the West. Spanish colonial water law, Native American water rights, agricultural concerns, and dam building. A concluding essay looks toward the future by examining the impact of cities on water and of water marketing on the western economy. As farmers and ranchers from Kansas to California compete for water with powerful urban economies, the West will continue to be reshaped by this scarce and precious resource. *Fluid Arguments* clearly shows that many of the current disputes over water take place without a real appreciation for the long history of the debate. By shedding new light on how water allocation is established and who controls it, this book makes a vital contribution to our understanding of water and growth in the region.

Cultural Understanding of Soils Nikola Patzel, Sabine Grunwald, Eric C. Brevik, Christian Feller, 2023-09-22 Cultural understandings of soil are diverse and often ambiguous Cultural framing of soils is common worldwide and is highly consequential The implications of what place the earth has in people's world view and everyday life can be in line with or in conflict with natural conditions with scientific views or with agricultural practices The main assumption underlying this work is that soil is inescapably perceived in a cultural context by any human This gives emergence to different significant webs of meaning influenced by religious spiritual or secular myths and by a wide range of beliefs values and ideas that people hold in all societies These patterns and their dynamics inform the human soil relationship and how soils are cared for protected or degraded Therefore there is need to deal inter culturally with different sources and types of knowledge and experience regarding soil a need to cultivate soil awareness and situationally appropriate care through inter and intra cultural dialogues and learning This project focuses on the human and intangible dimensions of soil To serve this aim the International Union of Soil Sciences IUSS founded a working group on Cultural Patterns of Soil Understanding that has resulted in this book which presents studies from almost all continents written by soil scientists and experts from other disciplines A major objective of this project is to promote intercultural literacy that gives readers the opportunity to appreciate soil across disciplinary and cultural boundaries in an increasingly globalized world

Agriculture and the Environment Noel D. Uri, 1999 This book looks at both of these significant issues the relationship between agricultural chemical use and the environment and the relationship between soil and water quality degradation associated with agricultural production in the environment
