Small Firms And Local Economic Networks The Death Of The Local Economy:

Small Firms and Local Economic Networks James Curran, Robert Blackburn, 1994-04-28 The last decade or so has witnessed unprecedented changes in the way private and public sector businesses organize their activities Changes in their internal organization downsizing reducing inventories contracting out and moves towards just in time production have precipitated many new kinds of external connections This book examines the relationships between small businesses large businesses and their local economies The wide ranging examination is based on data collected from over 400 businesses in seven contrasting localities in the United Kingdom All the owner managers and large organization representatives were interviewed face to face and background data was collected from numerous other individuals and sources The results of this research challenge accepted views on close links between small businesses and their local economies and the importance of local economic networks for small businesses The authors argue that small firm large firm links are less close than is often assumed and increasingly are not locally constrained The authors findings have profound implications for theory and policy They question the applicability of models of the changing economy such as industrial districts idealized in much of the recent literature The results also have implications for those agencies based on the locality attempting to reach small businesses as well as government policies attempting economic development Small Firms and Network Economies Martin

Perry, 2012-12-06 Recent development experience points to the way business can be the key to a dynamic small business sector especially where those links are built on high trust co operative relations This book reviews different types of small business network illustrated by an international selection of case studies including Chinese family business networks ethnic minority business networks Japanese and South Korean business group networks Taiwan s subcontracting networks European industrial districts Network promotion initiatives in Singapore New Zealand Scandinavia and the UK are each discussed to provide a comprehensive comparative assessment of small business networks **The Political Economy of**

the Small Firm Charles Dannreuther, Lew Perren, 2013-03-05 For many small firms are everyday realities of the economy and visible in every high street and industrial estate Their existence and importance is unquestionable Such beliefs are understandable but the authors of this new book would suggest they are misguided The Political Economy of the Small Firm challenges the assumptions regarding small firms that pervade society and political representation Small firms are not organised into a homogenous sector that has a clear constituency or political influence In fact the small firm is shown to be an inconstant political construct that is discursively ethereal and vulnerable to political exploitation Fusing theories from political science management and linguistics Dannreuther and Perren assert that the idea of the small firm is an important discursive resource used by political actors to legitimise their actions influence their citizens and help sustain regimes of accumulation On top of this the authors also empirically test their claims against 200 years of UK parliamentary debate from the Industrial Revolution to the Blair government The political construction of the small firm is shown not only to provide

rhetorical mechanisms to maintain periods of capitalist accumulation but also to increase the relative autonomy of the state and to centralise power to elite politicians For a period of 150 years up to the 1970s the small firm was an unexplored presence below the political radar and resonant with poor working standards and extreme forms of competition During the so called Fordist period from the 1930s the small firm was seen as the dirty out dated contrast to the clean modern future represented by mass production and corporations The perceived failure of Fordism led to the invention of the small firm and its presentation as an ideal political construct By fabricating assertions of what small firms are and what they want frequently out of conjecture the authors of this book show how political elites have been able to advocate radical reformist agendas since the 1970s in the name of a phantom constituency

Small Firms in the Japanese Economy D. H. Whittaker, 1999-06-24 Now in paperback this book considers the role of small firms in the Japanese economy and challenges established views of the Japanese economy society and political economy Japan's giant corporations are household names and dominate our views of the Japanese economy But surprisingly Japan also ranks alongside Italy as having the highest proportion of small firms and employment in them amongst the OECD countries These small firms have either been ignored or they have been treated as appendages of large firms This book paints a balanced picture based on a unique and statistically rich survey It looks at small firms in Japan's leading machine industries their relations with each other as well as with large firms and their internal management employment and technology dynamics Paradoxically in contrast to the resurgence of small firms in other industrialised countries their number and employment share in Japan are now in decline

The Business of Networks Robert Huggins, 2020-08-26 This title was first published in 2000 The first book which brings together and interprets both the theoretical concepts associated with the study of networks in the business world and the policy applications being applied to the practical building and development of such networks It maps the changes in the culture of economic development policy that occurred in the UK during the 1990s incorporating a detailed assessment of the contribution that the Training and Enterprise Councils made to business support policies The book is published at a time when network and cluster building has risen to the top of economic development agendas not only in UK but in many countries throughout the world It offers the most detailed insight so far available into the structure motivations and processes involved in developing business networks through institutional intervention The book is relevant to anyone with an interest in business policy and theory

Learning from Clusters Ron A. Boschma, Robert C. Kloosterman, 2006-03-30 Jan Lambooy retired in October 2002 When Jan was asked how he wanted to celebrate this occasion he was adamant that no great festivities should take place Characteristically Jan wanted just a scientific conference so he could learn something from it and as he insisted no great festivities So that is what we did and a conference was organised in Amsterdam on 25 October 2002 hosted by the Faculty of Economics and Econometrics of the University of Amsterdam Friends of Jan s from academia in the Netherlands and abroad participated and thus paid homage to Jan both as a scientist and as a person We are now very proud to present this festschrift firstly as the palpable result of this conference and secondly as a token of sincere respect and great affection for Jan Edited volumes run the danger of being a hotchpotch of contributions on a wide variety of topics Here we have explicitly focused on a central theme in contemporary economic geography and regional science namely the relationship between learning innovation and clustering Internationally renowned scientists made both theoretical and empirical contributions to this volume We think this book constitutes a broad palette of contemporary thinking and research on the relationship between spatial concentration and innovation and hope it will play a

significant role in future debates on this issue
