Lotzová, R. B. Hebermann, 1986-11-24 Biochemistry of Peptide Antibiotics Horst Kleinkauf, Hans von Döhren, 2019-07-22 No detailed description available for Biochemistry of Peptide Antibiotics *Screening for Biological Response Modifiers: Methods and Rationale* James E. Talmadge, Isaiah J. Fidler, R.K. Oldham, 2012-12-06 The observation in the 1950s that nitrogen mustard and other toxic chemicals could induce antitumor responses in patients with refractory lymphoma initiated a massive search for active chemotherapeutic agents The initial observations stimulated a search for new chemotherapeutic agents which might have increased antitumor activity with less toxicity for normal tissues To aid in the search for these new chemicals and to attempt to distinguish among the many toxic chemicals which might be candidates for clinical studies the National Cancer Institute the pharmaceutical industry and the cancer research laboratories of most Western nations developed systems for screening drugs for antitumor activity Perhaps the most extensive screening program was established by the National Cancer Institute 1 This screening program has evolved over the last two decades an

evolution which has been repeatedly reviewed 2 5 Various screening programs in use have examined over 500 000 compounds as potential anticancer agents From these there are now approximately forty anticancer drugs in clinical use The utility of these compounds and their toxicities have been reviewed on many occasions It is now apparent that more active and less toxic anticancer drugs are needed It is also clear that the current screening programs are identifying compounds with similar levels of activity and with continuing moderate to severe toxicity 6
