

SEMANTICS

Semantics is the branch of linguistics that deals with studying meaning in language. It examines the meaning of words, phrases, sentences, and language.

OVERVIEW

Semantics looks at literal and implied meanings, the connotations words may carry, and how these meanings can change across different contexts. It also studies the relationships between words and phrases, like synonymy (words with the same or similar meanings), antonymy (words with opposite meanings), and polysemy (words or phrases with multiple, related meanings).

EXAMPLE

Interpreting Irony: Irony refers to when someone says one thing but means another, often conveying implied criticism or sarcasm. For example, if someone says, "What a great day!" while standing in pouring rain, this would be ironic because it implies disappointment with the current situation despite saying otherwise through their words.

Situation Theory The Semantics:

Situation Theory and Its Applications: Volume 1 Robin Cooper, Kuniaki Mukai, John Perry, Center for the Study of Language and Information (U.S.), 1990 Situation Theory grew out of attempts by Jon Barwise in the late 1970s to provide a semantics for naked infinitive perceptual reports such as Claire saw Jon run Barwise's intuition was that Claire didn't just see Jon an individual but Jon doing something a situation Situations are individuals having properties and standing in relations A theory of situations would allow us to study and compare various types of situations or situation like entities such as facts events and scenes One of the central themes of situation theory of meaning and reference should be set within a general theory of information one moreover that is rich enough to do justice to perception communication and thought By now many people have contributed by the need to give a rigorous mathematical account of the principles of information that underwrite the theory

Situation Theory and Its Applications: Volume 2 Robin Cooper, Jon Barwise, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science AI linguistics logic philosophy and mathematics the theory is forging a common set of tools for the analysis of phenomena from all these fields This volume presents work that evolved out of the Second Conference on Situation Theory and its Applications Twenty six essays exhibit the wide range of the theory covering such topics as natural language semantics philosophical issues about information mathematical applications and the visual representation of information in computer systems Jon Barwise is a professor of philosophy mathematics and logic at Indiana University in Bloomington Jean Mark Gawron is a researcher at SRI International and a consultant at Hewlett Packard Laboratories Gordon Plotkin is a professor of theoretical computer science at the University of Edinburgh Syun Tutiya is in the philosophy department at Chiba University in Japan

Situation Theory and Its Applications: Volume 3 Robin Cooper, Peter Aczel, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried

The Semantics and Proof Theory of the Logic of Bunched

Implications David J. Pym, 2013-04-17 This is a monograph about logic. Specifically it presents the mathematical theory of the logic of bunched implications. I consider Bunched Implications' proof theory, model theory and computation theory. However the monograph is also about informatics in a sense which I explain. Specifically it is about mathematical models of resources and logics for reasoning about resources. I begin with an introduction which presents my background view of logic from the point of view of informatics, paying particular attention to three logical topics which have arisen from the development of logic within informatics: Resources as a basis for semantics, Proof search as a basis for reasoning and The theory of representation of object logics in a meta logic. The ensuing development represents a logical theory which draws upon the mathematical, philosophical and computational aspects of logic. Part I presents the logical theory of propositional Bunched Implications together with a computational interpretation. Part II presents a corresponding development for predicate Bunched Implications. In both parts I develop proof model and type theoretic analyses. I also provide semantically motivated computational perspectives so beginning a mathematical theory of resources. I have not included any analysis beyond conjecture of properties such as decidability, finite models, games or complexity. I prefer to leave these matters to other occasions, perhaps in broader contexts.
