Small Worlds The Dynamics Of Networks Between Order And Randomness:

Small Worlds Duncan J. Watts, 2004 Everyone knows the small world phenomenon Watts uses this intriguing phenomenon colloquially called six degrees of separation as a prelude to a more general exploration under what conditions can a small **Small Worlds** Duncan J. Watts, 1999 The small world phenomenon states that soon world arise in any kind of network after meeting a stranger we are surprised to discover that we are connected through a short chain of acquaintances This text provides an exploration of the conditions in which a small world can arise Power Grid Complexity Shengwei Mei, Xuemin Zhang, Ming Cao, 2011-09-15 Power Grid Complexity introduces the complex system theory known as self organized criticality SOC theory and complex network theory and their applications to power systems It studies the network characteristics of power systems such as their small world properties structural vulnerability decomposition and coordination strategies and simplification and equivalence methods The book also establishes four blackout models based on SOC theory through which the SOC of power systems is studied at both the macroscopic and microscopic levels Additionally applications of complex system theory in power system planning and emergency management platforms are also discussed in depth This book can serve as a useful reference for engineers and researchers working with power systems Shengwei Mei is a Professor at the Department of Electrical Engineering at Tsinghua University China Xuemin Zhang is a Lecturer at the Department of Electrical Engineering at Tsinghua University China Ming Cao is an Assistant Professor at the Faculty of Mathematics and Natural Sciences at the University of Groningen the Netherlands **Emergence in Complex, Cognitive, Social, and** Biological Systems Gianfranco Minati, Eliano Pessa, 2012-12-06 The systems movement is made up of many systems societies as well as of disciplinary researchers and researches explicitly or implicitly focusing on the subject of systemics officially introduced in the scientific community fifty years ago Many researches in different fields have been and continue to be sources of new ideas and challenges for the systems community To this regard a very important topic is the one of EMERGENCE Between the goals for the actual and future systems scientists there is certainly the definition of a general theory of emergence and the building of a general model of it The Italian Systems Society Associazione Italiana per la Ricerca sui Sistemi AIRS decided to devote its Second National Conference to this subject Because AIRS is organized under the form of a network of researchers institutions scholars professionals and teachers its research activity has an impact at different levels and in different ways Thus the topic of emergence was not only the focus of this conference but it is actually the main subject of many AIRS activities **Sustainable Development and Planning V** C. A. Brebbia, Elias Beriatos, 2011 This book contains the proceedings of the latest in a series of biennial conferences on the topic of sustainable regional development that began in 2003 Organised by the Wessex Institute of Technology the conference series provides a common forum for all scientists specialising in the range of subjects included within sustainable development and planning It has become apparent that planners environmentalists architects engineers policy makers and economists have to work together in order to ensure

that planning and development can meet our present needs without compromising the ability of future generations The topics covered by the papers included in the book include City planning Regional planning Social and political issues Sustainability in the built environment Rural developments Cultural heritage Transportation Ecosystems analysis protection and remediation Environmental management Environmental impact assessment Indicators of sustainability Sustainable solutions in developing countries Sustainable tourism Waste management Flood risk management Resources management and Industrial developments Innovative Algorithms and Techniques in Automation, Industrial Electronics and Telecommunications Tarek Sobh, Khaled Elleithy, Ausif Mahmood, Mohamed Karim, 2007-09-04 Innovative Algorithms and Techniques in Automation Industrial Electronics and Telecommunications includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Industrial Electronics Technology not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions from more than 70 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing softwareruns on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session BACK TO REALITY Arto Annila, 2020-07-15 WHAT IS TIME WHAT IS SPACE WHAT IS MATTER WHAT IS LIFE seem unrelated questions but take a look and find answers to many foundational questions from elementary particles to the expanding universe and from the evolution of biotas to the ascent of cultures through the scientific insight that everything that exists deep down comprises quanta of light How Behavior Spreads Damon Centola, 2020-03-24 A new counterintuitive theory for how social networks influence the spread of behavior New social movements technologies and public health initiatives often struggle to take off yet many diseases disperse rapidly without issue Can the lessons learned from the viral diffusion of diseases improve the spread of beneficial behaviors and innovations How Behavior Spreads presents over a decade of original research examining how changes in societal behavior in voting health technology and finance occur and the ways social networks can be used to influence how they propagate Damon Centola's startling findings show that the same conditions that accelerate the viral expansion of an epidemic

unexpectedly inhibit the spread of behaviors How Behavior Spreads is a must read for anyone interested in how the theory of social networks can transform our world Mesoporous Materials for Drug Delivery and Theranostics Valentina Cauda, Giancarlo Canavese, 2020-12-17 Mesoporous materials are capturing great interest thanks to their exceptional surface area uniform and tunable pore size ease surface functionalization thus enabling broad series of intervention in the field of nanomedicine Since many years these aspects foster a deep investigation on mesoporous nanoparticles to design and fabricate biocompatible smart and stimuli responsive nanotools for controlled drug or gene delivery theranostics applications in particular for cancer therapy and tissue engineering This Book is thus dedicated to the most recent advances in the field collecting research papers and reviews It spans from the synthesis and characterization of the mesoporous material especially those made of silica silicon and bioactive glasses to their functionalization with smart gate keepers reporter molecules or targeting ligands up to their in vitro applications in the nanomedicine field **Emergent Information Technologies and Enabling Policies for Counter-Terrorism** Robert L. Popp, John Yen, 2006-09-18 Explores both counter terrorism and enabling policy dimensions of emerging information technologies in national security After the September 11th attacks connecting the dots has become the watchword for using information and intelligence to protect the United States from future terrorist attacks Advanced and emerging information technologies offer key assets in confronting a secretive asymmetric and networked enemy Yet in a free and open society policies must ensure that these powerful technologies are used responsibly and that privacy and civil liberties remain protected Emergent Information Technologies and Enabling Policies for Counter Terrorism provides a unique integrated treatment of cutting edge counter terrorism technologies and their corresponding policy options Featuring contributions from nationally recognized authorities and experts this book brings together a diverse knowledge base for those charged with protecting our nation from terrorist attacks while preserving our civil liberties Topics covered include Counter terrorism modeling Quantitative and computational social science Signal processing and information management techniques Semantic Web and knowledge management technologies Information and intelligence sharing technologies Text data processing and language translation technologies Social network analysis Legal standards for data mining Potential structures for enabling policies Technical system design to support policy Countering terrorism in today s world requires innovative technologies and corresponding creative policies the two cannot be practically and realistically addressed separately Emergent Information Technologies and Enabling Policies for Counter Terrorism offers a comprehensive examination of both areas serving as an essential resource for students practitioners researchers developers and decision makers Intelligent Information Processing III K. Shimohara, D. Feng, 2007-11-14 As the world proceeds quickly into the Information Age it encounters both successes and challenges and it is well recognized that Intelligent Information Processing provides the key to the Information Age and to mastering many of these challenges Intelligent Information Processing supports the most advanced productive tools that are said to be able to change human life

and the world itself However the path is never a straight one and every new technology brings with it a spate of new research problems to be tackled by researchers As such the demand for Information Processing research is ever increasing This book presents the proceedings of the 4th IFIP International Conference on Intelligent Information Processing This conference provides a forum for engineers and scientists in academia university and industry to present their latest research The New Jewish Leaders Jack Wertheimer, 2011 A riveting findings in all aspects of Intelligent Information Processing study of a generational transition with major implications for American Jewish life **Social Networks and the Economics** of Sports Panos M. Pardalos, Victor Zamaraev, 2014-08-21 This book presents recent research developments in social networks economics management marketing and optimization applied to sports The volume will be of interest to students researchers managers from sports policy makers and as well athletes In particular the book contains research papers and reviews addressing the following issues social network tools for player selection movement and pricing in team sports methods for ranking teams and evaluating players performance economics and marketing issues related to sports clubs techniques for predicting outcomes of sports competitions optimal strategies in sports scheduling and managing sports tournaments optimal referee assignment techniques and the economics and marketing of sports entertainment 2015 - International Symposium On Mathematical And Computational Biology Rubem P Mondaini, 2016-04-28 This is a book of an international series on interdisciplinary topics of the Mathematical and Biological Sciences The chapters are related to selected papers on the research themes presented at BIOMAT 2015 International Symposium on Mathematical and Computational Biology which was held in the Roorkee Institute of Technology in Roorkee Uttarakhand India on November 02 06 2015 The treatment is both pedagogical and advanced in order to motivate research students to fulfill the requirements of professional practitioners As in other volumes of this series there are new important results on the interdisciplinary fields of mathematical and biological sciences and comprehensive reviews written by prominent scientific leaders of famous research groups There are new results based on the state of art research in Population Dynamics on Pattern Recognition of Biological Phenomena the Mathematical Modelling of Infectious Diseases Computational Biology the Dynamic and Geometric Modelling of Biological Phenomena the Modelling of Physiological Disorders the Optimal Control Techniques in Mathematical Modelling of Biological Phenomena the Hydrodynamics and Elasticity of Cell Tissues and Bacterial Growth and the Mathematical Morphology of Biological Structures All these contributions are also strongly recommended to professionals from other scientific areas aiming to work on these interdisciplinary fields Advances in Network Analysis and its Applications Evangelos Kranakis, 2012-10-24 As well as highlighting potentially useful applications for network analysis this volume identifies new targets for mathematical research that promise to provide insights into network systems theory as well as facilitating the cross fertilization of ideas between sectors Focusing on financial security and social aspects of networking the volume adds to the growing body of evidence showing that network analysis has applications to transportation

communication health finance and social policy more broadly. It provides powerful models for understanding the behavior of complex systems that in turn will impact numerous cutting edge sectors in science and engineering such as wireless communication network security distributed computing and social networking financial analysis and cyber warfare The volume offers an insider s view of cutting edge research in network systems including methodologies with immense potential for interdisciplinary application The contributors have all presented material at a series of workshops organized on behalf of Canada's MITACS initiative which funds projects and study grants in mathematics for information technology and complex systems These proceedings include papers from workshops on financial networks network security and cryptography and social networks MITACS has shown that the partly ghettoized nature of network systems research has led to duplicated work in discrete fields and thus this initiative has the potential to save time and accelerate the pace of research in a number of areas of network systems research **Philosophy of the Tourist** Hiroki Azuma, 2023-04-11 An inventive philosophical study that reconsiders the figure of the tourist Tourism is a characteristically modern phenomenon yet modern thinkers have tended to deride the tourist as a figure of homogenizing globalism This philosophical study considers the tourist anew as a subject position that enables us to redraw the map of globalized culture in an era increasingly in revolt against the liberal intellectual worldview and its call for the welcome of the Other Why has the tourist proved so resistant to philosophical treatment asks Hiroki Azuma Tracing the reasons for this exclusion through the work of Rousseau and Voltaire and subsequently in Kant Carl Schmitt Alexandre Koj ve Hannah Arendt and Hardt and Negri Azuma contends that the figure of the tourist has been rendered illegible by becoming ensuared in a series of misleading conceptual dichotomies and a linear model of world history In the widening gap between the infrastructure of globalization and inherited ties of local and national belonging Azuma's retheorization of the tourist presents an alternative to the choice between doubling down on local identity and roots or hoping for the spontaneous uprising of a multitude from within the great networked Empire For the tourist is the subject capable of moving most freely between the strata of the global and the local With explorations of the connection between tourism and fan fiction contingency and misdelivery cyberspace and the uncanny and dark tourism Azuma s inventive and optimistic philosophical essay sheds unexpected new light on a mode of engagement with the world that is familiar to us all MATLAB Guide Desmond J.
