Cyberrotica Julie's Tale is a story that tells of the main character Julie. She is an attractive and well-educated woman who becomes lonely and isolated and by chance turns to the internet in an attempt to alleviate her desolation. Whilst using a chat room she meets two characters who begin to play a substantial part in not only the cyber world of the chat room but spills into the psyche of her daily life. The male character starts to induce feelings in Julie where she accepts his invitation to begin a new life in America. Whilst in America Julie is further initiated into believing she has made the right choice and suspects nothing when she leaves for another country to begin her training. When Julie arrives in this new country it soon becomes apparent that the life she was expecting to lead is far removed. Through the adversity she becomes friends with Anna a Swedish citizen who then accompanies Julie on the rest of the journey through the story. The two women soon learn they have become a commodity that will be used in the world of commerce to enable lucrative business dealings for the clients of the organisation to which they now belong. The story tells of their time in captivity where they learn more about the deception and where escape appears impossible but eventually there is the possibility of rescue.

By the dawn of the new millennium robotics has undergone a major transformation in scope and dimensions. This expansion has been brought about by the maturity of the field and the advances in its related technologies. From a largely dominant industrial focus robotics has been rapidly expanding into the challenges of the human world. The new generation of robots is expected to safely and dependably co-habitat with humans in homes, workplaces and communities providing support in services, entertainment, education, healthcare, manufacturing and assistance. Beyond its impact on physical robots, the body of knowledge robotics has produced is revealing a much wider range of applications reaching across diverse research areas and scientific disciplines such as biomechanics, haptics, neurosciences, virtual simulation, animation, surgery and sensor networks among others. In return, the challenges of the new emerging areas are proving an abundant source of stimulation and insights for the field of robotics. It is indeed at the intersection of disciplines that the most striking advances happen. The goal of the series of Springer Tracts in Advanced Robotics STAR is to bring in a timely fashion the latest advances and developments in robotics on the basis of their significance and quality. It is our hope that the wider dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field.
