Spline Functions Basic Theory:

Spline Functions: Basic Theory Larry Schumaker, 2007-08-16 This classic work continues to offer a comprehensive treatment of the theory of univariate and tensor product splines. It will be of interest to researchers and students working in applied analysis, numerical analysis, computer science, and engineering. The material covered provides the reader with the necessary tools for understanding the many applications of splines in such diverse areas as approximation theory, computer aided geometric design, curve and surface design, and fitting image processing, numerical solution of differential equations, and increasingly in business and the biosciences. This new edition includes a supplement outlining some of the major advances in the theory since 1981 and some 250 new references. It can be used as the main or supplementary text for courses in splines, approximation theory, or numerical analysis.

Spline Functions Larry L. Schumaker, 2015-08-13 This book describes in detail the key algorithms needed for computing with spline functions and illustrates their use in solving several basic problems in numerical analysis including function approximation, numerical quadrature, data fitting, and the numerical solution of PDEs. The focus is on computational methods for bivariate splines on triangulations in the plane and on the sphere, although both univariate and tensor product splines are also discussed. The book contains numerous examples and figures to illustrate the methods and their performance. All of the algorithms in the book have been coded in a separate MATLAB package available for license. The package can be used to run all of the examples in the book and also provides readers with the essential tools needed to create software for their own applications. In addition to the included bibliography, a list of over 100 pages of additional references can be found on the book's website.

Spline Functions Larry L. Schumaker, 2019 **Spline Functions** Larry L. Schumaker, 2024-12-09 This book is a continuation of the author's earlier book *Spline Functions: Computational Methods* published in 2015 by SIAM. This new book focuses on computational methods developed in the last ten years that make use of splines to approximate functions and data and to solve boundary value problems. The first half of the book works with bivariate spaces of splines defined on H triangulations, T meshes, and curved triangulations. Trivariate tensor product splines and splines on tetrahedral partitions are also discussed. The second half of the book makes use of these spaces to solve boundary value problems with a

special emphasis on elliptic PDEs defined on curved domains The book contains numerous examples and figures to illustrate the methods and their performance In addition to the included bibliography a 125 page list of additional references can be downloaded from the SIAM website All of the algorithms in the book have been coded in MATLAB and are included in a package that can also be downloaded from the website It can be used to run all of the examples in the book The package also provides an extensive toolbox of functions that readers can utilize to develop their own spline software The book is designed for mathematicians engineers scientists and anyone else wanting to make use of spline functions for numerical computation

Approximation Theory and Spline Functions S.P. Singh,J.H.W. Burry,B. Watson,2012-12-06 A NATO Advanced Study Institute on Approximation Theory and Spline Functions was held at Memorial University of Newfoundland during August 22 September 2 1983 This volume consists of the Proceedings of that Institute These Proceedings include the main invited talks and contributed papers given during the Institute The aim of these lectures was to bring together Mathematicians Physicists and Engineers working in the field The lectures covered a wide range including 1ultivariate Approximation Spline Functions Rational Approximation Applications of Elliptic Integrals and Functions in the Theory of Approximation and Pade Approximation We express our sincere thanks to Professors E W Cheney J Meinguet J M Phillips and H Werner members of the International Advisory Committee We also extend our thanks to the main speakers and the invi ted speakers whose contri butions made these Proceedings complete The Advanced Study Institute was financed by the NATO Scientific Affairs Division We express our thanks for the generous support We wish to thank members of the Department of Mathematics and Statistics at MeMorial University who willingly helped with the planning and organizing of the Institute Special thanks go to Mrs Mary Pike who helped immensely in the planning and organizing of the Institute and to Miss Rosalind Genge for her careful and excellent typing of the manuscript of these Proceedings

Spline Functions and Multivariate Interpolations Borislav D. Bojanov,H. Hakopian,B. Sahakian,2013-06-29 Spline functions entered Approximation Theory as solutions of natural extremal problems A typical example is the problem of drawing a function curve through given n k points that has a minimal norm of its k th derivative Isolated facts about the functions now called splines can be found in the papers of L Euler A Lebesgue G Birkhoff J Favard L Tschakaloff However the Theory of Spline Functions has developed in the last 30 years by the effort of dozens of mathematicians Recent fundamental results on multivariate polynomial interpolation and multivari ate splines have initiated a new wave of theoretical investigations and variety of applications The purpose of this book is to introduce the reader to the theory of spline functions The emphasis is given to some new developments such as the general Birkoff s type interpolation the extremal properties of the splines and their prominent role in the optimal recovery of functions multivariate interpolation by polynomials and splines The material presented is based on the lectures of the authors given to the students at the University of Sofia and Yerevan University during the last 10 years Some more elementary results are left as excercises and detailed hints are given

Spline Functions and the Theory of Wavelets Serge Dubuc,Gilles

Deslauriers,1999-01-01 This work is based on a series of thematic workshops on the theory of wavelets and the theory of splines Important applications are included The volume is divided into four parts Spline Functions Theory of Wavelets Wavelets in Physics and Splines and Wavelets in Statistics Part one presents the broad spectrum of current research in the theory and applications of spline functions Theory ranges from classical univariate spline approximation to an abstract framework for multivariate spline interpolation Applications include scattered data interpolation differential equations and various techniques in CAGD Part two considers two developments in subdivision schemes one for uniform regularity and the other for irregular situations The latter includes construction of multidimensional wavelet bases and determination of bases with a given time frequency localization In part three the multifractal formalism is extended to fractal functions involving oscillating singularities There is a review of a method of quantization of classical systems based on the theory of coherent states Wavelets are applied in the domains of atomic molecular and condensed matter physics In part four ways in which wavelets can be used to solve important function estimation problems in statistics are shown Different wavelet estimators are proposed in the following distinct cases functions with discontinuities errors that are no longer Gaussian wavelet estimation with robustness and error distribution that is no longer stationary Some of the contributions in this volume are current research results not previously available in monograph form The volume features many applications and interesting new theoretical developments Readers will find powerful methods for studying irregularities in mathematics physics and statistics

Splines and PDEs: From Approximation Theory to Numerical Linear Algebra Angela Kunoth,Tom Lyche,Giancarlo Sangalli,Stefano Serra-Capizzano,2018-09-20 This book takes readers on a multi perspective tour through state of the art mathematical developments related to the numerical treatment of PDEs based on splines and in particular isogeometric methods A wide variety of research topics are covered ranging from approximation theory to structured numerical linear algebra More precisely the book provides i a self contained introduction to B splines with special focus on approximation and hierarchical refinement ii a broad survey of numerical schemes for control problems based on B splines and B spline type wavelets iii an exhaustive description of methods for computing and analyzing the spectral distribution of discretization matrices and iv a detailed overview of the mathematical and implementational aspects of isogeometric analysis The text is the outcome of a C I M E summer school held in Cetraro Italy July 2017 featuring four prominent lecturers with different theoretical and application perspectives The book may serve both as a reference and an entry point into further research
