The History Of Cartography:

The New Nature of Maps J. B. Harley, 2002-10-03 In these essays the author draws on ideas in art history literature philosophy and the study of visual culture to subvert the traditional positivist model of cartography and replace it with one grounded in an iconological and semiotic theory of the nature of maps

The History of Cartography John Brian Harley, David Woodward, Mark S. Monmonier, 1987 When the University of Chicago Press launched the landmark History of Cartography series nearly thirty years ago founding editors J B Harley and David Woodward hoped to create a new basis for map history They did not however anticipate the larger renaissance in map studies that the series would inspire But as the renown of the series and the comprehensiveness and acuity of the present volume demonstrate the history of cartography has proven to be unexpectedly fertile ground

The History of Cartography John Brian Harley, David Woodward, Mark S. Monmonier, 1987 When the University of Chicago Press launched the landmark History of Cartography series nearly thirty years ago founding editors J B Harley and David Woodward hoped to create a new basis for map history They did not however anticipate the larger renaissance in map studies that the series would inspire But as the renown of the series and the comprehensiveness and acuity of the present volume demonstrate the history of cartography has proven to be unexpectedly fertile ground

Cartography in the European Renaissance treats the period from 1450 to 1650 long considered the most important in the history of European mapping This period witnessed a flowering in the production of maps comparable to that in the fields of literature and fine arts Scientific advances appropriations of classical mapping techniques burgeoning trade routes all such massive changes drove an explosion in the making and using of maps While this volume presents detailed histories of mapping in such well documented regions as Italy and Spain it also breaks significant new ground by treating Renaissance Europe in its most expansive geographical sense giving careful attention to often neglected regions like Scandinavia East Central Europe and Russia and by providing innovative interpretive essays on the technological scientific cultural and social aspects of cartography Lavishly illustrated with more than a thousand maps many in color the two volumes of Cartography in the European Renaissance will be the unsurpassable standard in its field both defining it and propelling it forward

History of Cartography Leo Bagrow, 2017-07-12 This illustrated work is intended to acquaint readers with the early maps produced in both Europe and the rest of the world and to tell us something of their development their makers and printers their varieties and characteristics The authors chief concern is with the appearance of maps they exclude any examination of their content or of scientific methods of mapmaking This book ends in the second half of the eighteenth century when craftsmanship was superseded by specialized science and the machine As a history of the evolution of the early map it is a stunning work of art and science This expanded second edition of Bagrow and Skelton's History of Cartography marks the reappearance of this seminal work after a hiatus of nearly a half century As a reprint project undertaken many years after the book last appeared finding suitable materials to work from proved to be no easy task

Because of the wealth of monochrome and color plates the book could only be properly reproduced using the original materials. Ultimately the authors were able to obtain materials from the original printer. Scotchprints or contact films made directly from original plates thus allowing the work to preserve the beauty and clarity of the illustrations. Old maps collated with other materials help us to elucidate the course of human history. It was not until the eighteenth century however that maps were gradually stripped of their artistic decoration and transformed into plain specialist sources of information based upon measurement. Maps are objects of historical artistic and cultural significance and thus collecting them seems to need no justification simply enjoyment. The History of Cartography David Woodward, J. B.
