Routledge Revivals: The Design Professions and the Built Environment (1988) Paul L Knox,2016-10-04 First published in 1988 this book argues that discussions of urban development often neglect to consider that much of the urban environment is designed by architects and planners and that the particular world view of architects and planners is crucial for the way proposals are taken up modified and carried out The author explores the world view of architects and planners considering their approach to design and the factors which influence this work patterns career paths and the firms in which they operate The author also studies their place in the political decision making process as it affects urban questions and then explores how architects and planners roles are changing *Professionalism for the Built Environment* Simon Foxell,2018-09-03 In the aftermath of the Grenfell Tower tragedy this new book provides thought provoking commentary on the nature of the relationship between society the prevailing economic system and professionalism in the built environment It addresses the changing responsibilities of professionals and in particular their obligation to act in the wider public interest It is both an introduction to and an examination of professionalism and professional bodies in the sector including a view of the future of professionalism and the organisations serving it Simon Foxell outlines the history of professionalism in the sector comparing and contrasting the development of the three major historic professions working in the construction industry civil engineering architecture and surveying He examines how their systems have developed over time up to the current period dominated by large professional services firms and looks at some options for the future whilst asking difficult questions about ethics training education public trust and expectation from within and outside the industry The book concludes with a six point plan to help if not ensure that the professions remain an effective and essential part of both society and the economy a part that allows the system to operate smoothly and easily but also fairly and to the benefit of all Essential reading for built environment professionals and students doing the professional studies elements of their training or in the process of applying for chartership or registration The issues and lessons are applicable across all building professions Environmental Design Perspectives Wolfgang F.
