Bowers, 2007 Using an innovative approach to evidence for the medieval hospital and medical practice this collection of essays presents new research by leading international scholars in creating a holistic look at the hospital as an environment within a social and intellectual context **Rise of the Modern Hospital** Jeanne Kisacky, 2017-12-02 Rise of the Modern Hospital is a focused examination of hospital design in the United States from the 1870s through the 1940s This understudied period witnessed profound changes in hospitals as they shifted from last charitable resorts for the sick poor to premier locations of cutting edge medical treatment for all classes and from low rise decentralized facilities to high rise centralized structures Jeanne Kisacky reveals the changing role of the hospital within the city the competing claims of doctors and architects for expertise in hospital design and the influence of new medical theories and practices on established traditions She traces the dilemma designers faced between creating an environment that could function as a therapy in and of itself and an environment that was essentially a tool for the facilitation of increasingly technologically assisted medical procedures Heavily illustrated with floor plans drawings and photographs this book considers the hospital building as both a cultural artifact revelatory of external medical and social change and a cultural determinant actively shaping what could and did take place within hospitals **A Social History of Medicine** Joan Lane, 2012-11-12 A Social History of Medicine traces the development of medical practice from the Industrial Revolution right through to the twentieth century Drawing on a wide range of source material it charts the changing relationship between patients and practitioners over this period exploring the impact made by institutional care government intervention and scientific discovery The study illuminates the extent to which medical assistance really was available to patients over the period by focusing on provincial areas and using local sources It introduces a variety of contemporary medical practitioners some of them hitherto unknown and with fascinating intricate details of their work The text offers an extensive thematic survey including coverage of institutions such as hospitals dispensaries asylums and prisons midwifery and nursing infections and how changes in science have affected disease control contraception war and the NHS The Cambridge Social History of Britain, 1750-1950 F. M. L. Thompson, 1990 Whilst in

certain quarters it may be fashionable to suppose that there is no such thing as society historians they have had no difficulty in finding their subject The difficulty rather is that an outpouring of research and writing is hard for anyone but the specialist to keep up with the literature or grasp the overall picture In these three volumes as is the tradition in Cambridge Histories a team of specialists has assembled the jigsaw of topical monographic research and presented an interpretation of the development of modern British society since 1750 from three perspectives those of regional communities the working and living environment and social institutions Each volume is self contained and each contribution thematically defined contains its own chronology of the period under review Taken as a whole they offer an authoritative and comprehensive view of the manner and method of the shaping of society in the two centuries of unprecedented demographic and economic change

Health and Architecture Mohammad Gharipour, 2021-05-06 Health and Architecture offers a uniquely global overview of the healthcare facility in the pre modern era engaging in a cross cultural analysis of the architectural response to medical developments and the formation of specialized hospitals as an independent building typology Whether constructed as part of Chinese palaces in the 15th century or the religious complexes in 16th century Ottoman Istanbul the healthcare facility throughout history is a built environment intended to promote healing and caring The essays in this volume address how the relationships between architectural forms associated with healthcare and other buildings in the pre modern era such as bathhouses almshouses schools and places of worship reflect changing attitudes towards healing They explore the impact of medical advances on the design of hospitals across various times and geographies and examine the historic construction processes and the stylistic connections between places of care and other building types and their development in urban context Deploying new methodological interdisciplinary and comparative approaches to the analysis of healthcare facilities Health and Architecture demonstrates how the spaces of healthcare themselves offer some of the most powerful and practical articulations of therapy
