Acocella,2021-05-11 Volcanoes have terrified and at the same time fascinated civilizations for thousands of years Many aspects of volcanoes most notably the eruptive processes and the compositional variations of magma have been widely investigated for several decades and today constitute the core of any volcanology textbook Nevertheless in the last two decades boosted by the availability of volcano monitoring data there has been an increasing interest in the pre eruptive processes related to the shallow accumulation and to the transfer of magma approaching the surface as well as in the resulting structure of volcanoes These are innovative and essential aspects of modern volcanology and as driving volcanic unrest their understanding also improves hazard assessment and eruption forecasting So far the significant progress made in unravelling these volcano tectonic processes has not been supported by a comprehensive overview This monograph aims at filling this gap describing the pre eruptive processes related to the structure deformation and tectonics of volcanoes at the local and regional scale in any tectonic setting The monograph is organized into three sections Fundamentals Magma migration towards the surface and The regional perspective consisting of thirteen chapters that are lavishly illustrated The reader is accompanied in a journey within the volcano factory discovering the processes associated with the shallow accumulation of magma and its transfer towards the surface how these control the structure of volcanoes and their activity and ultimately improve our ability to estimate hazard and forecast eruption The potential readership includes any academic researcher and upper undergraduate student interested in volcanology magma intrusions structural geology tectonics geodesy as well as geology and geophysics in general Configuration for Wireless Network Based on Hotspot and CAPsMAN

Maya Sari,Azriel Christian Nurcahyo,2024-08-02 In the present scenario a growing need is stressed on having wireless networks both indoors and outdoors of diverse large environments like public areas corporate offices and government sectors schools and colleges Traditional network deployments on the other hand generally rely on either bridging or rather on the full CSS deployment method while often making use of NAT on every access point This causes interference with access points operating beyond the DHCP server lease limits with frequent loop issues arising within the wireless infrastructures Thus network administrators face the challenge of adding many simultaneous access points that do not have the ability to be integrated thus giving rise to numerous challenges in meeting demand with reliable networking solutions that provide quick distribution of vouchers or enable user registrations per ID especially during peak usage periods involving large numbers of users who are connected concurrently
