

Internal Body Organs

Humans have five vital organs that are essential for their survival. These are the brain, heart, lungs, kidneys, liver and pancreas. The major organs are supported by several smaller organs.

Brain

The brain is the control centre of the nervous system. It is protected by the cranial cavity in the skull.

Kidneys

The kidneys are located behind the stomach. They filter the blood by removing waste, control fluid balance and maintain levels of electrolytes.

Small Intestine

The small intestine is mainly responsible for the absorption of nutrients and minerals from food as part of the digestive system.

Large Intestine

This organ removes water from the waste remaining after the digestion system has finished processing food.

Liver and Gall Bladder

The liver aids the body of toxic substances and produces bile. Under the liver is the gall bladder. It stores and concentrates the bile secreted by the liver. The bile is then released into the small intestine to assist in the digestion of fats.

Pancreas

This organ produces pancreatic juice which is used by the small intestine to break down starches, proteins and fats.

Lungs

A pair of sponge-like organs used for breathing. They remove carbon dioxide from the blood and take in oxygen.

Heart

The heart is a muscular organ responsible for pumping blood through the circulatory system.

Spleen

The spleen makes antibodies, filters the blood, stores red blood cells, and destroys old blood cells.

Stomach

The stomach is a hollow organ that holds food. Glands in the stomach produce gastric juice to break down proteins and hydrochloric acid to kill any bacteria ingested with food.

Alongside a revival of interest in Thomism in philosophy scholars have realised its relevance when addressing certain contemporary issues in bioethics This book offers a rigorous interpretation of Aquinas's metaphysics and ethical thought and highlights its significance to questions in bioethics Jason T Eberl applies Aquinas's views on the seminal topics of human nature and morality to key questions in bioethics at the margins of human life questions which are currently contested in the academia politics and the media such as When does a human person's life begin How should we define and clinically determine a person's death Is abortion ever morally permissible How should we resolve the conflict between the potential benefits of embryonic stem cell research and the lives of human embryos Does cloning involve a misuse of human ingenuity and technology What forms of treatment are appropriate for irreversibly comatose patients How should we care for patients who experience unbearable suffering as they approach the end of life Thomistic Principles and Bioethics presents a significant philosophical viewpoint which will motivate further dialogue amongst religious and secular arenas of inquiry concerning such complex issues of both individual and public concern
