The Human Semantic Potential Spatial Language And Constrained Connectionism:

The Human Semantic Potential Terry Regier, 1996-08 Regier's work makes a distinct and tangible contribution to the study of cognition and should be read by anyone interested in language acquisition in particular and learning in general. This work brings about an impressive integration of ideas from cognitive linguistics, connectionism, and computer science in order to attack the problem of learning perceptually grounded semantics of spatial terms. The research reported in this book is an excellent example of interdisciplinary work. Lokendra Shastri, Member AI Group, International Computer Science Institute, Berkeley. Regier develops a structured connectionist model for acquiring spatial concepts that represents the epitome of cognitive science, integrating perspectives from linguistics, artificial intelligence, and psychology. This work further represents an excellent example of how a complex model should be analyzed to establish its core properties, implications, and limitations. Besides having considerable scientific merit, the book is highly engaging, frequently provocative, and beautifully written. Lawrence W. Barsalou, Professor of Psychology, University of Chicago. Drawing on ideas from cognitive linguistics, connectionism, and perception, *The Human Semantic Potential* describes a connectionist model that learns perceptually grounded semantics for natural language in spatial terms. Languages differ in the ways in which they structure space, and Regier's aim is to have the model perform its learning task for terms from any natural language. The system has so far succeeded in learning spatial terms from English, German, Russian, Japanese, and Mixtec. The model views simple movies of two-dimensional objects moving relative to one another and learns to classify them linguistically in accordance with the spatial system of some natural language. The overall goal is to determine which sorts of spatial configurations and events are learnable as the semantics for spatial terms and which are not. Ultimately, the model and its theoretical underpinnings are a step in the direction of articulating biologically based constraints on the nature of human semantic systems. Along the way, Regier takes up such substantial issues as the attraction and the liabilities of PDP and structured connectionist modeling, the problem of learning without direct negative evidence, and the area of linguistic universals, which is addressed in the model itself. Trained on spatial terms from different languages, the model permits observations about the possible bases of linguistic universals and interlanguage variation. **Neural Network Modeling and Connectionism series**

Connectionism and the Philosophy of Psychology Terry Horgan, John Tienson, 1996 In this volume the authors present their view of cognition They propose that unlike the classical paradigm that takes the mind to be a computer the mind is best understood as a dynamical system realized in a neural network

The Semantics of Dynamic Space in French Michel Aurnague, Dejan Stosic, 2019-07-29 Research on the semantics of spatial markers in French is known mainly through Vandeloise's 1986 1991 work on static prepositions However interest in the expression of space in French goes back to the mid 1970s and focused first on verbs denoting changes in space whose syntactic properties were related to specific semantic distinctions such as the opposition between movement and displacement This volume provides an overview of recent studies on the semantics of dynamic space in French and addresses important questions about motion expression among which goal bias and asymmetry of motion the status of locative PPs the expression of manner fictive or non actual motion Descriptive experimental and formal or computational analyses are presented providing complementary perspectives on the main issue The volume is intended for researchers and advanced students wishing to learn about both spatial semantics in French and recent debates on the representation of motion events in language and cognition

From Perception to Meaning Beate Hampe, 2008-08-22 The 1987 landmark publications by G Lakoff and M Johnson made image schema one of the cornerstone concepts of the emerging experientialist paradigm of Cognitive Linguistics a framework founded upon the rejection of the mind/body dichotomy and stressing the fundamentally embodied nature of meaning imagination and reason hence language Conceived of as the pre linguistic dynamic and highly schematic gestalts arising directly from motor movement object manipulation and perceptual interaction image schemas served to anchor abstract reasoning and imagination to sensori motor patterns in the conceptual theory of metaphor Being itself informed by preceding crosslinguistic work on semantic primitives in the linguistic representations of spatial relations carried out by L Talmy R Langacker and others the notion has inspired a large amount of subsequent research and debate on diverse issues ranging from the meaning structure and acquisition of natural languages to the embodied mind itself From Perception to Meaning is the first survey of current image schema theory and offers a collection of original and innovative essays by leading scholars many of whom have shaped the theory from the very beginning The edition unites essays on major issues in recent research on image schemas from aspects of their definition and linguistic formalization their psychological status and neural grounding to their role as semantic universals and primitives in language acquisition The book will thus not only be welcomed by linguists of a cognitive orientation but will prove relevant to

philosophers psychologists and anthropologists interested in language and indeed to anyone studying the embodied mind

Cognitive Linguistics - Foundations of Language Ewa Dąbrowska,Dagmar Divjak,2019-07-08 Cognitive foundations of language introduces the reader to the abilities and processes in which research in Cognitive Linguistics is grounded The book looks at key concepts such as embodiment salience entrenchment construal categorization and collaborative communication and discusses their genesis and implications for cognitive linguistic research **Essentials of Cognitive**

Grammar Ronald W. Langacker,2013-02-28 Tailored to students this abridged version of Cognitive Grammar positions Langacker s authoritative work as an accessible attractive cornerstone of cognitive linguistics as the field continues to evolve

Handbook of Categorization in Cognitive Science Henri Cohen,Claire Lefebvre,2017-06-03 Handbook of Categorization in Cognitive Science Second Edition presents the study of categories and the process of categorization as viewed through the lens of the founding disciplines of the cognitive sciences and how the study of categorization has long been at the core of each of these disciplines The literature on categorization reveals there is a plethora of definitions theories models and methods to apprehend this central object of study The contributions in this handbook reflect this diversity For example the notion of category is not uniform across these contributions and there are multiple definitions of the notion of concept Furthermore the study of category and categorization is approached differently within each discipline For some authors the categories themselves constitute the object of study whereas for others it is the process of categorization and for others still it is the technical manipulation of large chunks of information Finally yet another contrast has to do with the biological versus artificial nature of agents or categorizers Defines notions of category and categorization Discusses the nature of categories discrete vague or other Explores the modality effects on categories Bridges the category divide calling attention to the bridges that have already been built and avenues for further cross fertilization between disciplines Language and Ideology René Dirven,Bruce Hawkins,Esra Sandikcioglu,2001-02-27 Together with its sister volume on Descriptive Cognitive Approaches this volume explores the contribution which cognitive linguistics can make to the identification and analysis of overt and hidden ideologies As a theory of language which sees language as the accumulation of the conventionalised conceptualisations of a given linguistic and or cultural community or sub group within it cognitive linguistics is called upon to make its own inroads in the study of ideology This volume offers theoretical approaches and first discusses the philosophical foundations of cognitive linguistics The question whether cognitive linguistics is not an ideology itself is not tabooed The speaker s deictic centre is the anchoring point not only for spatial temporal or interactional deixis but also for cultural and ideological deixis Cognitive linguistics is also confronted with a severe Marxist critique but the potential convergence between the two philosophies is highlighted as well Further the question is raised to what extent the central nervous system and the grammatical system of a language impose sexually biased and hence ideological representations on cognition Finally linguistics itself is seen as a potential bearer of ideological deviations as was the case with the politics of linguistics in Nazi

Germany and even with the quest for the Indo European homeland in comparative and historical linguistics throughout the 19th century and well into the 20th century Substrate and Adstrate Micah Corum, 2015-04-24 This volume provides a large scale in depth analysis of locative structures in Nigerian Pidgin and Ghanaian Pidgin English and compares those structures to locatives in their lexifier substrate and adstrate languages The work draws on new research methods for investigating substrate and adstrate influence in semantics and creole genesis
