Guide to Natural Ventilation in High Rise Office Buildings

Antony Wood, Ruba Salib, 2013 This guide sets out recommendations for every phase of the planning construction and operation of natural ventilation systems in these buildings including local climatic factors that need to be taken into account how to plan for seasonal variations in weather and the risks in adopting different implementation strategies All of the recommendations are based on analysis of the research findings from richly illustrated international case studies This is the first technical guide from the Council on Tall Buildings and Urban Habitat s Tall Buildings Sustainability Working Group looking in depth at a key element in the creation of tall buildings with a much reduced environmental impact while taking the industry closer to an appreciation of what constitutes a sustainable tall building and what factors affect the sustainability threshold for tall

Tall Buildings Mehmet Halis Günel, Hüseyin Emre Ilgin, 2014-06-27 The structural challenges of building 800 metres into the sky are substantial and include several factors which do not affect low rise construction This book focusses on these areas specifically to provide the architectural and structural knowledge which must be taken into account in order to design tall buildings successfully In presenting examples of steel reinforced concrete and composite structural systems for such buildings it is shown that wind load has a very important effect on the architectural and structural design The aerodynamic approach to tall buildings is considered in this context as is earthquake induced lateral loading Case studies of some of the world s most iconic buildings illustrated with full colour photographs structural plans and axonometrics will bring to life the design challenges which they presented to architects and structural engineers The Empire State Building the Burj Khalifa Taipei 101 and the HSB Turning Torso are just a few examples of the buildings whose real life specifications are used to explain and illustrate core design principles and their subsequent effect on the finished structure

The Costs of Climate Change Mitigation Innovations David S-K. Ting, Jacqueline A. Stagner, 2024-04-18 The notion that humanity may be too late to alter climate change could potentially lead to fear and therefore the advocacy of implementing radical strategies and or hastening the execution of certain measures to the extreme There is evidence that extensive and intensive implementation of some climate change solutions can significantly alter the environment and ecosystems in unintended ways For example the microclimate of a field in the proximity and downstream of a closely packed

array of wind turbines can be noticeably altered by the modified lower atmospheric fluxes caused by the turbines which can then negatively affect crop yields Additionally some studies have found that large scale solar fields can result in the modulation of atmospheric circulation leading to changes in regional precipitation The Costs of Climate Change Mitigation Innovations A Pragmatic Outlook provides a forum for discussion on the long term consequences of various climate strategies It promotes our striving toward minimizing the potential negative impact of new interventions by performing objective holistic analyses The bottom line is that we do not want today's solutions to become tomorrow's problems Future Urban Habitation Oliver Heckmann, 2022-03-08 Presents forward looking concepts innovative research and transdisciplinary perspectives for developing strategies for future urban habitation Around the globe urban populations are growing at an unprecedented rate in particular in Asia and Africa In view of pressing social and environmental challenges it is essential to reimagine current design strategies to build affordable sustainable and inclusive communities that can respond to future demographic dynamics new social practices and the consequences of climate change Future Urban Habitation presents an integrative transdisciplinary approach for developing long term strategies for urban housing at a different scales With focus on the rapidly growing cities of Asia and urban processes in Europe and North America this volume offers perspectives from both researchers and practitioners involved in multiple aspects of urban habitation The authors address a range of challenges to urban habitation with four intersecting thematic frameworks Inclusive Urbanism High Dense Typologies for Building Community Adaptable and Responsive Habitation and New Tools and Approaches Throughout the text readers are presented with innovative design ideas from different fields new concepts for social practices and sustainable housing policies recent research on urban housing and more Exploring both social and architectural strategies for sustainable and livable dwelling models Future Urban Habitation Addresses challenges associated with urbanization population growth societal segregation shifting demographics and the crisis of care and climate change Discusses advanced approaches for design thinking and design research and the impact of inclusive people centric social design Explores the building of collaboration based cohesive neighborhoods and community based social and health services Describes the use of innovative tools and methods affecting design practices and decision making processes such as co design social design parametric design performance simulation and sustainable construction to develop urban housing Includes perspectives and concepts from policy makers in housing boards and social service administrations urban planners architectural and social designers innovators in sustainable construction and researchers working on urban society Future Urban Habitation is an invaluable resource for designers from various fields including architecture urban planning and social design for researchers from social science and design fields and for policymakers and other practitioners working on the provision of housing and the facilitation of social services in urban environments Green Walls in High-Rise Buildings Antony Wood, Payam Bahrami & Daniel Safarik, The Images Publishing Group, 2014-08-29 The Council on Tall Buildings and Urban Habitat has produced four

Technical Guides to date since the series launched in late 2012 Each of these guides is the product of a CTBUH Working Group committees formed specifically to address focused topical subjects in the industry The intention of each guide is the same to provide working knowledge to the typical building owner or professional who wants a better understanding of available options for improving tall buildings and what affects their design The object of the series is to provide a tool kit for the creation of better performing tall buildings and to spread the understanding of the considerations that need to be made in designing tall This technical guide offers an extensive overview of the use of vertical vegetation in high rise buildings an indepth analysis of green walls definitions and typology including standards policies and incentives It features comprehensive case studies along with architectural theories of the public and private benefits of green walls The book delves into architect design considerations and limitations the effects of green walls on energy efficiencies and includes recommendations and future research

Form Follows Energy Brian Cody, 2017-10-23 Architecture is energy Lines drawn on paper to represent architectural intentions also imply decades and sometimes centuries of associated energy and material flows *Form Follows Energy* is about the relationship between energy and the form of our built environment It examines the optimisation of energy flows in building and urban design and the implications for form and configuration It speaks to both architectural and engineering audiences and offers for the first time a truly interdisciplinary overview on the subject explaining the complex relationships between energy and architecture in an easy to follow manner and using simple diagrams to show how energy design strategies can be used to maximize the energy performance of our built environment while at the same time leading to new aesthetic qualities and radically new forms in architecture and urban design Case studies are used to illustrate the theory The books philosophy is based on the guiding principles underlying nearly 30 years work in practice research and teaching It is relatively easy to make something simple seem complicated To make a complex topic seem simple and easily understandable is far more of a challenge and this is the aim of this book

The Skycourt and Skygarden Jason Pomeroy, 2013-11-20 Population increases advances in technology and the continued trend towards inner city migration have transformed the traditional city of spaces into the modern city of objects This has necessitated alternative spatial and technological solutions to replenish those environments that were once so intrinsic to society s day to day interactions and communal activities This book considers skycourts and skygardens as alternative social spaces that form part of a broader multi level urban infrastructure seeking to make good the loss of open space within the built environment Jason Pomeroy begins the discussion with the decline of the public realm and how the semi public realm has been incorporated into a spatial hierarchy that supports the primary figurative spaces on the ground or in their absence creates them in the sky He then considers skycourts and skygardens in terms of the social cultural economic environmental technological and spatial benefits that they provide to the urban habitat Pomeroy concludes by advocating a new hybrid that can harness the social characteristics of the public domain but be placed within buildings as an alternative communal space for the 21st century

Using graphics and full colour images throughout the author explores 40 current and forthcoming skycourt and skygarden projects from around the world including the Shard London Marina Bay Sands Singapore the Shanghai Tower China and the Lotte Tower South Korea *Urban Ecology for Citizens and Planners* Gail Hansen, Joseli Macedo, 2021-11-09 This volume offers a wealth of information and examples for those looking to help bring urban environments into harmony with the natural world and make cities more sustainable
