The papers are organized around the following topics: semantic web and knowledge management, indexing and distributed systems, network embedding, trajectory and time series data processing, data mining, query processing and optimization, text mining, recommendation, security, privacy, sensor and cloud, social network analytics, map matching and spatial keywords, query processing and optimization, search and information retrieval, string and sequence processing, stream data processing, graph and network data processing, spatial databases, real time data processing, big data, social networks and graphs. *Skylines and Other Dominance-Based Queries* Apostolos N. Papadopoulos, Eleftherios Tiakas, Theodoros Tzouramanis, Nikolaos Georgiadis, Yannis Manolopoulos, 2022-06-01 This book is a gentle introduction to dominance based query processing techniques and their applications. The book aims to present fundamental as well as some advanced issues in the area in a precise but easy to follow manner. Dominance is an intuitive concept that can be used in many different ways in diverse application domains. The concept of dominance is based on the values of the attributes of each object. An object dominates another object if it is better than. This goodness criterion may differ from one user to another. However, all decisions boil down to the minimization or maximization of attribute values. In this book, we will explore algorithms and applications related to dominance based query processing. The concept of dominance has a long history in finance and multi criteria optimization. However, the introduction of the concept to the database community in 2001 inspired many researchers to contribute to the area. Therefore, many algorithmic techniques have been proposed for the efficient processing of dominance based queries such as skyline queries, dominant queries and top
