## **Spin The Planet:**

*The Science of Spin* Roland Ennos, 2024-07-09 What exactly made the earth round How do boomerangs turn around mid air And why do cats always land on their feet A basic scientific concept receives long overdue attention Kirkus Reviews in this fascinating Wall Street Journal new book from the masterful author of *The Age of Wood* From the solar system to spinning tops hurricanes to hula hoops power plants to pendulums one mysterious force shapes almost every aspect of our lives spin Despite its ubiquity rotational force continues to baffle and surprise and few people realize how it makes our planet habitable or how it has been tamed by engineers to make our lives more comfortable Charting the development of engineering and technology from the earliest prehistoric drills to the gas turbine critically acclaimed author and scientist Roland Ennos presents a riveting account of human ingenuity and the seemingly infinite ways spin affects our daily lives He also shows how this new approach not only helps us better understand the world but also ourselves After all even our own bodies are complex systems of rotating joints and levers Artfully moving between astrophysics and anthropology *The Science of Spin* shows how whether natural or engineered spin is really what makes the world go round *The Planet Factory* Elizabeth Tasker, 2017-09-07 Forget about rockets to Mars the future of space science lies with the search for exoplanets Twenty years ago the search for planets outside the Solar System was the preserve of science fiction writers Now it s one of the fastest growing fields in astronomy with thousands of exoplanets discovered to date and the number rising fast These new found worlds are more alien than anything in fiction Planets larger than Jupiter with years lasting a week others with two suns lighting their skies or with no sun at all Planets with diamond mantles supporting oceans of tar possible Earth sized worlds with split hemispheres of perpetual day and night waterworlds drowning under global oceans and volcanic lava planets awash with seas of magma The discovery of this diversity is just the beginning There is a whole galaxy of possibilities *The Planet Factory* tells the story of these exoplanets What can we learn about these faraway surface environments and planetary atmospheres And do the results hint at the tantalising possibility of alien life *Stars on the Earth* Richard Leviton, 2006-08 Discover the wonderful secret the Earth holds for us that the stars of the galaxy live on our planet Holograms of high magnitude stars over holy mountains Physical travel to other planets through stargates on the Earth s surface Near instantaneous transportation across the planet through quick way portals Outrageous science fiction or sober geomantic fact *Earth Mysteries* researcher Richard Leviton takes you on a wild tour of three geomantic features of our planet and reveals that what science fiction has dreamed the Earth in fact offers us *Stars on the Earth* combines scholarship clairvoyance and field experience with the latest discoveries of geology and astrophysics and the timeless insights of the world s myths to open the planetary door to the stars It s all part of the Earth s unsuspected but staggeringly rich endowment as a designer planet Our planet was precisely designed and implemented for us and it s equipped with a visionary geography that mirrors features of the galaxy and Heavens Why are so many of the Earth s mountains said to be holy producing visions and encounters with

the gods They all have canopies of light called domes each transmitting the presence of a galactic star What is the geomantic origin of the Bermuda Triangle Two dysfunctional stargates If working properly they and the Earth's other two million stargates could transport us rapidly to other planets Is there a way to travel quickly across the planet without using cars airplanes boats or trains Yes and it's called a traversable wormhole and the Earth has thousands of them awaiting our discovery and use Come join the tour of a planet you've never seen before our own star infused Earth

**Hidden in the Heavens** Jason Steffen, 2024-10-29 An insider's account of the NASA mission that changed our understanding of planets planetary systems and the stars they orbit Are we alone in the universe It's a fundamental question for Earth dwelling humankind Are there other worlds like ours out there somewhere In Hidden in the Heavens Jason Steffen a former scientist on NASA's Kepler mission describes how that mission searched for planets orbiting Sun like stars especially Earth like planets circulating in Earth like orbits What the Kepler space telescope found Steffen reports contradicted centuries of theoretical and observational work and transformed our understanding of planets planetary systems and the stars they orbit Kepler discovered thousands of planets orbiting distant stars a bewildering variety of celestial bodies including rocky planets being vaporized by the intense heat of their host star super Earths and sub Neptunes with properties simultaneously similar to and different from both Earth and Neptune gas giants several times the size and mass of Jupiter and planets orbiting in stellar systems that had only been imagined in science fiction It was Steffen says the opportunity of a lifetime to work in the most exciting scientific field on the most awe inspiring mission He offers a unique inside account of the work of the Kepler science team and the sometimes chaotic interactions among team members mapping the progress of the mission from the launch of the rocket that carried Kepler into space to the revelations of the data that began to flow to the supercomputer back at NASA evidence of strange new worlds unlike anything found in our own solar system

**Planetary Science** George H. A. Cole, Michael M. Woolfson, 2002-04-01 There are many planetary systems other than our own but it is only through a detailed understanding of the relatively accessible bodies in our solar system that a thorough appreciation of planetary science can be gained This is particularly pertinent with the recent discovery of extra solar planets and the desire to understand their formation and

Committee on arrangements for the observation of the transit of Venus, 1882,1887      Hypothesis on MATTER Nainan K. Varghese,2008-05-09

Hypothesis on MATTER is a revolutionary alternative concept which attempts to explain all physical phenomena related to matter based on just one type of fundamental particle the Quantum of matter These particles form what the author calls 2D energy fields Space is assumed to contain an infinite number of 2D Energy Fields extending in all directions Nainan masterfully explains a wide array of physical phenomena from the origin of matter to gravity and subatomic interactions to cosmological events based on the simple mechanical interactions of quanta of matter There is no more any need to envisage actions at a distance or to invoke irrational assumptions like diversity of forces mass energy equivalence constancy of light s speed dual nature of electric charge singularities big bang etc This new concept will radically alter our understanding of the physical universe and at the same time explain complex physical phenomena with simple Cause and Effect relationships

**A Beginner's Guide to the Universe** Andrew Conway,Rosie Coleman,2003 A Beginners Guide to the Universe is a fascinating introduction to astronomy and the wonders of the night sky It begins by looking at the universe as a whole describing what we can see in the night sky The solar system is then explored in detail taking each planet in turn from the hot world of Mercury near the Sun to the distant frozen world of Pluto Moons asteroids meteoroids and comets are described and objects outside our solar system are explained Readers will learn what stars are and how they cluster together to form galaxies that allow us to map out the furthest reaches of our Universe At the end of the book Professor John Brown Astronomer Royal for Scotland answers astronomy questions posed by schoolchildren Written in an accessible language this guide will appeal to both children and adults wishing to learn about astronomy for the first time      **Earth** Subhasis Sen,2007-05-16 This book seeks to provide a new and integrated perspective on the Earth Supporting the earth expansion theory and based on it the book offers a new interpretation on the total earth system including global tectonics which explains the cause of earth s expansion formation of the continents oceans and mid oceanic ridges formation of mountain ranges the nature of mantle core and fluid geosphere magnetic features of the planet distribution of temperature pressure and gravity in the interior of the planet cause of perennial heat of the planet and various other features of global significance The book offers a totally new concept and interpretation of gravity and provides explanations as to why the earth s core of the outer core using the new theory and the implication of the earth s rotation in revamping and shaping the crustal manner
