Spinal Cord Sensation Sensory Processing In The Dorsal Horn:

Spinal Cord Sensation A. G. Brown, 1981 **Processing of Sensory Information in the Superficial Dorsal Horn of the Spinal Cord** F. Cervero, G. J. Bennett, P. M. Headley, 2012-12-06 This book constitutes the proceedings of a NATO Advanced Research Workshop held in El Escorial Spain from 22-27 May 1988 with the title Processing of sensory information in the superficial dorsal horn of the spinal cord Included in the book are reports of most of the main lectures given at the meeting section introductions written by each session Chairman section reports compiled by session rapporteurs and some short papers invited from authors of communications given in poster form The latter were selected on the basis of being immediately relevant to the topic of the workshop and of originating from a laboratory not represented by the main speakers All in all we believe that the reader can get a fair idea of the structure and general character of this Workshop The overall aim of the meeting was to review the current state of knowledge on the role of the superficial dorsal horn of the mammalian spinal cord as a nucleus of relay and modulation of the somatic and visceral sensory input to the central nervous system In this context the contribution of this spinal cord region to the appreciation of pain was a central topic of discussion Over the last decade there has been a considerable increase in anatomical physiological and neurochemical studies of the superficial dorsal horn *Plasticity in the Somatosensory System of Developing and Mature Mammals — The Effects of Injury to the Central and Peripheral Nervous System* Peter J. Snow, Peter Wilson, 2012-12-06 Rarely have the many mechanisms that might underlie neural plasticity been examined as explicitly as they are in this broad lavishly illustrated treatment of plasticity in the somatosensory system The reader is provided with state of the art knowledge of connections at all levels of the somatosensory system The authors examine the propensity for changes of connectivity in both the mature and developing mammal and make clear proposals regarding the mechanisms underlying these changes Their functional significance to relevant psychophysical and neurological observations is also discussed Spinal Cord Sensation Alan Geoffrey Brown, M. Réthelyi, 1981 *Neurosurgical Management of Pain* Richard B. North, Robert M. Levy, 2012-12-06 Neurosurgical Management of Pain presents the full range of procedures for the management of chronic intractable pain Criteria for patient selection the details of operative techniques risks complications and expected outcomes are offered for a wide variety of anatomic ablative and augmentative neurosurgical procedures for the treatment of pain Chapters on the latest neuroaugmentative advances utilizing electrical stimulation and implantable drug infusion systems are included as well as a useful section providing algorithms and guidelines for evaluation and treatment of specific pain syndromes Over 100 exquisite line drawings and photographs augment the text For both the trainee and experienced neurosurgeon this volume is invaluable for acquiring the critical judgement and clinical skills necessary to apply these procedures **Handbook of Psychopharmacology** Leslie L. Iversen, Susan D. Iversen, Solomon H. Snyder, 2012-12-06 Volume 15 of Handbook of Psychopharmacology represents the first of a new series of volumes whose aim is to bring earlier sections of the work up to

date by describing the latest developments in the field It is now seven years since the first Handbook volumes on Basic Neuropharmacology were published and there have been many important advances As in many other areas in science progress in this field has depended to a considerable extent on the availability of new experimental methods and Volume 15 reviews some major recent developments including new autoradiographic techniques that allow direct visualization of drug and transmitter receptors in the nervous system and the pinpointing of the precise locations of the changes in brain metabolism elicited by various drug treatments Volumes 16 and 17 will cover two of the most active areas for basic research in psychopharmacology at the moment the characterization of drug and transmitter receptors in brain by radioligand binding techniques and studies of the role of small peptides in brain function The latter area in particular illustrates how rapidly progress continues to be made in basic research on the mechanisms of chemical communication within the nervous system Seven years ago when the Handbook first appeared none of the opioid peptides enkephalins and endorphins had yet been identified Since then a whole new area of basic biological research has focused on these substances and in addition we know of more than thirty other neuropeptides with putative eNS transmitter functions
