The brain is divided into two halves, the left and right hemispheres. Each hemisphere is further divided into four lobes: the frontal lobe, the parietal lobe, the temporal lobe, and the occipital lobe. Each lobe has specific functions. The right side of the heart pumps blood to the lungs, and the left side pumps blood to the rest of the body. The heart is made of muscle and has a network of blood vessels that carry blood to and from the organs.

THE LUNGS
The lungs are two organs in the chest that are responsible for breathing. They are made of spongy tissue and have a network of blood vessels. The lungs take in oxygen from the air and release carbon dioxide. The lungs are connected to the trachea, which is the windpipe. The trachea is made of cartilage and has a network of blood vessels.

It includes the mouth, the esophagus, the stomach, the small intestine, the large intestine, and the rectum. The digestive system is made of muscle and has a network of blood vessels. The digestive system takes in food from the mouth and moves it through the organs to the rectum, where it is eliminated from the body.

The reproductive system is the system of organs that is responsible for producing offspring. It includes the testes in males and the ovaries in females. The reproductive system is made of muscle and has a network of blood vessels. The reproductive system produces sperm in males and eggs in females.
