The Development Of Visual Perception

The Development Of Visual Perception:

The Development of Visual Perception Richard R. Rosinski, 1977 *Development Visual Perception* Richard R. Rosinski, 1977-01-01 *The Development of Vision* P.A. Gardiner, 2012-12-06 This book is intended to be an aid to all who are concerned with assessing vision and handling day to day problems during the growth of infants and children It is directed mainly to community doctors health visitors school nurses general practitioners paediatricians and teachers Members of all these groups have expressed to the author their ignorance and indeed fear of visual problems resulting either in nonchalance or over anxiety based on the traditional misinformation which most of us have about our eyesight It is particularly important that nurses and teachers should be able to identify and scale the severity or otherwise of any visual problem The book is not primarily one of theory nor does it make any pretence of being weighty or encyclopaedic It is hoped that it will be of use in conjunction with training courses Those who wish to go deeper will be helped by the references to further reading It is inevitable that technical jargon should creep in but this has been resisted where possible and a glossary has been provided in the hope that anyone interested in children's eyesight will find the book readable May 1981 P A Gardiner Guy's Hospital 7 7

ACKNOWLEDGEMENTS I would like to record my thanks to the band of illustrators *The Development of Visual Perception in the Pre-school Child* Elaine F. Belgum, 1971 Increasing attention has been tendered to the visual perceptual development of young children This attention has been focused on training procedures to improve visual perceptual ability and tests to screen development of the same There is not a great amount of research available on the young preschool child The writer endeavored to research the following topics as they pertain to the preschool child 1 The development of visual perception in the very early years 2 The effectiveness of a visual perceptual training program 3 The relationship of visual perceptual skills to reading readiness and reading success 4 The visual modality of learning 5 Valid instruments for assessing visual perception

Visual Perception Lothar Spillmann, John S. Werner, 2012-12-02 This book presents an interdisciplinary overview of the main facts and theories that guide contemporary research on visual perception While the chapters cover virtually all areas of visual science from philosophical foundations to computational algorithms and from photoreceptor processes to neuronal networks no attempt has been made to provide an exhaustive treatment of these topics Rather researchers from such diverse disciplines as psychology neurophysiology anatomy and clinical vision sciences have worked together to review some of the most important correlations between perceptual phenomena and the underlying neurophysiological processes and mechanisms The book is thus intended to serve as an advanced text for graduate students and as a guide for all vision researchers to understanding current progress outside their specialized fields of interest Examines parallel processing of visual information Discusses links between physiologically measured receptive fields and psychophysically measured perceptive fields Presents a spatial sampling by the retina and cortical modules Covers signal transduction and the sites of adaptation Describes a single cell analysis of attention Discusses computational models of vision

Vision - Its Development in Infant and Child

Arnold Gesell,2013-04-18 This antiquarian book contains a treatise on the importance and influence of vision in the development of infants and children Cinemanalysis has demonstrated that the eyes play an important role in the ontogenesis of the total action system of the child and the nature and dynamics of that role constitute the subject matter of the present study This is a text that will appeal to those with a keen interest in the science of human development and the importance of vision and the eye therein and it would make for a worthy addition to collections of allied literature The chapters of this book include The Visual Domain The Complex of Visual Functions The Young Eye in Action The Ontogenesis of Visual Behavior Maldevelopment and Child Vision A Developmental Hygiene of Child Vision The Conservation of Child Vision etcetera We are republishing this vintage book now complete with a new prefatory biography of the author On the Development of Visual Perception and Attention Harold Griffing,1896*

Development of Perception Richard Aslin,2012-12-02 Development of Perception Psychobiological Perspectives Volume 2 The Visual System is the second of two part series covering vision audition olfaction taste tactile sensitivity and sensory motor activity during ontogenesis The focus is on approaches to perceptual development that incorporate a psychobiological perspective The present volume brings together several topics of critical importance to the process of understanding the visual system The book is organized into three parts Part A addresses the theoretical and interpretive issues involved in designing and drawing conclusions from research on the development of the visual system Part B on animal studies of visual development covers the neural and behavioral characteristics of the cat and monkey visual system during the early postnatal period Part C examines visual development in human infants Together these three parts offer a comprehensive coverage of major issues in the structure and function of the developing mammalian visual system Each chapter emphasizes the behavioral consequences of developing visual functions Neurovision: Neural

bases of binocular vision and coordination and their implications in visual training programs Olivier A. Coubard,2015-10-12 Binocular vision is achieved by five neurovisual systems originating in the retina but varying in their destination within the brain Two systems have been widely studied the retino tectal or retino collicular route which subserves an expedient and raw estimate of the visual scene through the magnocellular pathway and the retino occipital or retino cortical route which allows slower but refined analysis of the visual scene through the parvocellular pathway But there also exist further neurovisual systems the retino hypothalamic retino pretectal and accessory optic systems which play a crucial role in vision though they are less understood The retino pretectal pathway projecting onto the pretectum is critical for the pupillary or photomotor reflex The retino hypothalamic pathway projecting onto the suprachiasmatic nucleus regulates numerous behavioral and biological functions as well as circadian rhythms The accessory optic system targeting terminal lateral medial and dorsal nuclei through the paraoptic fasciculus plays a role in head and gaze orientation as well as slow movements Taken together these neurovisual systems involve 60% of brain activity thus highlighting the importance of vision in the functioning and

regulation of the central nervous system But vision is first and foremost action which makes perception impossible without movement Binocular coordination is a prerequisite for binocular fusion of the object of interest on the two foveas thus ensuring visual perception The retino collicular pathway is sufficient to elicit reflexive eye movements with short latencies Thanks to its motor neurons the superior colliculus activates premotor neurons which themselves activate motor neurons of the oculomotor trochlear and abducens nuclei At a higher level a cascade of neural mechanisms participates in the control of decisional eye movements The superior colliculus is controlled by the substantia nigra pars reticulata which is itself gated by subcortical structures such as the dorsal striatum The superior colliculus is also inhibited by the dorsolateral prefrontal cortex through a direct prefrontotectal tract Cortical areas are crucial for the triggering of eye movements the frontal eye field supplementary eye field and parietal eye field Finally the cerebellum maintains accuracy The focus of the present research topic entitled Neural bases of binocular vision and coordination and their implications in visual training programs is to review the most recent findings in brain imaging and neurophysiology of binocular vision and coordination in humans and animals with frontally placed eyes The emphasis is put on studies that enable transfer of knowledge toward visual training programs targeting visual field defects e g hemianopia and binocular functional disorders e g amblyopia
