

Two Aging Processes

Biological Vs. Environmental Aging

Only 10% of skin aging is due to the body's natural aging process

The remaining 90% is caused by external factors like pollution, blue light and UV rays

Skin And Aging Processes:

Skin and Aging Processes Barbara A. Gilchrest, 1984-02-10 This text deals comprehensively with the aging processes of the skin. It organizes the disciplines of dermatologic gerontology and geriatrics and critically examines their current content with an eye to future needs. All aspects of the aging processes in the skin are considered: psychosocial effects, medical and financial impacts of skin disease, documented use of the skin as a model system for gerontologic studies, and general theories of aging. Age-associated changes in normal human skin are defined, and previously published studies on this subject are critically reviewed. For each skin disorder, diagnostic criteria, clinical and histologic features, and therapeutic options are reviewed in light of possible pathogenic mechanisms and their relationship to the aging process. Molecular Mechanisms of the Aging Process and Rejuvenation Naofumi Shiomi, 2016-08-31 Numerous studies had been performed to elucidate the mechanisms of aging and to achieve rejuvenation with some success reported in recent years. However, at present, the findings from those studies are not sufficient to resolve the issue of aging. This book presents an overview of recent topics on cellular aging and rejuvenation. In the early chapters, the molecular mechanisms of aging via the activities of clock and ion channel proteins, in addition to overall aspects, are discussed. In the latter part, the aging of the skin, immune system, and brain is discussed. This book will prove useful for those studying or developing new drugs to counter the aging process and will encourage the development of novel ideas for rejuvenation.

Textbook of Aging Skin Miranda A. Farage, Kenneth W. Miller, Howard I. Maibach, 2009-12-02 This comprehensive Major Reference Book compiles all current and latest information on aging skin in a two-volume set. Highly structured with a reader-friendly format, it covers a wide range of areas such as basic sciences, the different diseases and conditions which occur with aging, from malignant to non-malignant, the latest techniques and methods being used, such as bioengineering methods and biometrics, as well as toxicological and safety considerations for the elderly population. It also illustrates the global consumer's sociological and psychological implications, ethnicity, and gender differences and includes marketing considerations for this elderly group. This unique and comprehensive guide will become the main reference textbook on this topic.

Cutaneous Photoaging Rachel E. B. Watson, Christopher E. M. Griffiths, 2019-08-22 Photoaging results from chronic exposure to UV radiation and is an increasingly common clinical feature with an aging population. The clinical burden is likely to increase despite advances in our understanding of the pathology and development of improved treatments. This book will present and review the latest progress from the forefront of translational research in cutaneous photoaging. The core chapters focus on the current understanding of the biochemical mechanisms of photoageing and lead on to aspects of photoprotection and photomedicine to provide a complete picture of the current field and a context for the importance of the basic mechanistic understanding. With a global team of authors, Cutaneous Photoaging provides an international perspective on the causes, consequences, pathophysiology, and treatment of photoaging, ideal for dermatologists, students, and professionals in photoscience.

Reactive Oxygen Species, 2022-04-28 The term

reactive oxygen species ROS refers to a group of reactive molecules and free radicals produced by molecular oxygen. In recent decades there has been great interest in the role of ROS in various diseases. From basic science research to clinical trials, biomedical scientists have made rapid progress toward a better understanding of ROS metabolizing systems and their role in health and diseases. This book includes sixteen chapters that address topics such as the history of ROS, its role in autoimmunity, neurodegeneration and aging, and recent advances in various antioxidants and their therapeutic potential.

Biophysical and Physiological Effects of Solar Radiation on Human Skin Paolo U. Giacomoni, 2007-10-31. In an era of global warming, knowledge of the effects of solar radiation on humans is of great importance, and the latest discoveries in environmental photobiology are presented in this book. The Editor has brought together a wide range of world-class contributors to provide the reader with information on the clinical effects of solar radiation, such as inflammation, pigmentation, immune suppression, cancer, and aging, with emphasis on the ethnic or genetic background. The book also offers updates on the biochemical mechanisms involved in the generation of damage to DNA, lipids, and proteins, and on their removal. Each chapter has been written to provide a historical description of the phenomenology, followed by the description of the state of the art. In this way, non-specialized and specialized readers alike can be updated in the essential aspects of the field. Key topics include: Damages from acute versus chronic sun exposure, Skin Color, Melanin, Race, Ethnicity, and UV-Induced DNA Damage. The effects of solar radiation on the immune response in humans, Genetic background, and UV-induced skin cancer. The photochemistry of indirect damages, Lipid and Protein Damage provoked by UV radiation, DNA repair therapy. This title will become an indispensable resource for students and professionals at all levels working in fields relating to photochemistry, environmental science, biochemistry, and biotechnology.

Molecular Mechanisms of Skin Aging and Age-Related Diseases Taihao Quan, 2016-04-21. Our skin changes as we age. It becomes thinner and loses fat, making it less plump and smooth. Clinically aged skin is characterized by wrinkles, sagging, age spots, and dryness. Emphasizing laboratory and clinical research, this book comprehensively describes the molecular mechanisms of human skin aging and age-related skin diseases. This includes:
