,1987 Civilian Space Policy and Applications ,1982 **Animals Strike Curious Poses** Elena Passarello,2017-02-06 It might be the best book on animals I've ever read. It's also the only one that's made me laugh out loud. Helen Macdonald *The New York Times Book Review* Beginning with Yuka, a 39,000-year-old mummified woolly mammoth recently found in the Siberian permafrost, each of the sixteen essays in *Animals Strike Curious Poses* investigates a different famous animal named and immortalized by humans. Modeled loosely after a medieval bestiary, these witty, playful, whip-smart essays from a winner of a Whiting Award for nonfiction traverse history, myth, science, and more, bringing each beast vibrantly to life. Stunning. Passarello's keen wit is on display throughout as she raises questions about the uniqueness of humans. A feast of surprising juxtapositions and gorgeous prose. *Publishers Weekly* starred review. I've spent decades reading books on the roles animals play in human cultures, but none have ever made me think and feel as much as this one. It's a devastating meditation on our relationship to the natural world. Helen Macdonald *The New York Times Book Review* Skylab Tony Salvitti,2015-05-17 It has been over 40 years since America launched its first space station, SKYLAB, into orbit. Learn about the only 9 astronauts and their mission to train, experiment, and utilize the orbiting laboratory. Included are many rare diagrams of SKYLAB's interior and how the astronauts paved the way for mankind into outer space. **Disasters and Accidents in Manned Spaceflight** Shayler David,2000-05-17 Here Dave Shayler examines the hurdles faced by space crews as they prepare and embark on space missions. Divided into six parts, the text opens with the fateful, tragic mission of the Challenger crew in 1986. This is followed by a review of the risks that accompany every space trip and the unique environment in which the space explorer lives and works. The next four sections cover the four parts of any space flight: training, launch, in-flight, and recovery, and present major historical incidents in each case. The final section looks at the next forty years beyond the Earth's atmosphere, beginning with the International Space Station and moving on to the difficulties inherent in a manned exploration of Mars.
