**Indexes to the Epilepsy Accessions of the Epilepsy Information System**, 1981      **Sleep & Dreaming** D.

Cohen, 2013-10-22 Sleep and dreaming are manifestations in higher organisms of a fundamental circadian rhythm of inactivity activity During the past thirty years research has provided a great deal of new information about the phenomenon and phenomenology of sleep and the relationship between sleep and wakefulness This book aims to describe organise and interpret some of this new knowledge in order to stimulate a greater appreciation of the role of sleep and dreaming in human adaptation The study of sleep and dreaming provides a very special perspective on human functioning It stands in direct contrast to more traditional paradigms utilised in psychology that place the locus of explanation of human behaviour in the external environment      **Sleep Disorders Part II** Pasquale Montagna, Sudhansu Chokroverty, 2012-11-27 Sleep Disorders II covers various aspects of sleep disorders These include the different classification of sleep disorders the genetic influences of sleep disorders abnormality in the sleeping pattern and the circadian rhythm sleep disorder A sleep disorder is a medical disorder that affects the sleeping patterns of humans and sometimes animals The disruptions in sleep can be caused by different factors such as teeth grinding night terrors and the like The book also discusses different perspectives on insomnia and hypersomnia According to the International Classification of Sleep Disorders insomnia is a sleep that is low in quality or a difficulty in sleeping On the other hand hypersomnia is a sleeping disorder characterized by excessive daytime sleepiness EDS or prolonged nighttime sleep The book discusses narcolepsy a syndrome that is characterized by excessive daytime sleepiness that is associated with cataplexy and other REM sleep phenomena The different medicines for this disease are also discussed People who are practicing neurology and internal medicine especially those in pulmonary cardiovascular gastrointestinal renal and endocrine specialties will find this book valuable A comprehensive resource for the study of sleep science sleep medicine and sleep disorders Fascinating noninvasive neuroimaging studies that demonstrate marked changes during different sleep states A state of the art reference that summarizes the clinical features and management of many of the neurological manifestations of sleep disorders      *Psychotropic Agents*, 2012-12-06 The description of the pharmacology of psychotomimetics cannabis and alcohol in this third volume concludes the discussion on psychotropic agents As psychomotor stimulants these groups of psychotropic agents are of little or no therapeutic relevance but since they are used in a nonmedical manner or are even considered by some groups of the population as social commodities their behavioral effects and psychopharmacological properties are not the concern of the pharmacologist alone The same is true of psychotomimetics as well as cannabis and its components Psychotomimetics have a social history going back many hundreds of years and are among the most potent psychotropic agents known to man The closing description of psychopharmacology also deals with the psychotropic effects of a number of drugs not primarily considered to be psychotropic Their psychotropic

effects are either an inherent constituent of their therapeutic profile as is the case with opiates hypnotics and caffeine or they may occur indirectly as side effects or accompanying effects during therapy This applies to p adrenoreceptor antagonists and anticholinergics The editors are also aware that a description of psychotropic agents would not have been complete without discussing the medical ethical and legal aspects of the development clinical testing and use of such drugs
