Kenwood, A. L. Loughheed, 1971-06-30 Here is an introduction to the study of the international economy as a mechanism for diffusing modern economic growth between nations It is divided into three parts of which the first examines the workings of the system in the years before 1914 This includes an analysis of the conditions favorable to the growth of international economic relations during the period examines the changing character of the international flows of labor capital and trade and surveys contemporary commercial and international monetary policies This first part concludes with a chapter analyzing the international economy as a mechanism for diffusing economic growth and another chapter examining the nature of the economic trends and fluctuations associated with this phase in the growth of the international economic system The second part gives an account of the collapse of the international economy during the interwar years and traces the causes of collapse

to changes in the structure and functioning of the system brought about by World War I and the depression of the 1930s The final part takes the story beyond World War II It describes the wartime and post war efforts to reconstruct the international economic system and examines the working of the new system in the period after 1945 bringing out both its strengths and its weaknesses The International Economy Peter B. Kenen,2000-01-13 This text is a rigorous introduction to international

economics for upper level undergraduates and above The first half examines the causes and effects of international trade how tariffs and other trade policies affect the gains from trade and the ways in which governments try collectively to regulate those policies The second half deals with monetary matters the behavior of exchange rates how trade and capital flows affect the functioning of monetary and fiscal policies the causes and management of currency crises and the new European Monetary Union EMU This fourth edition assesses the outcome of the Uruguay Round of trade negotiations the work of the new World Trade Organization WTO and the challenges posed by regional trade blocs It surveys recent theoretical work on currency crisis examines recent crises in emerging market countries and the role of the International Monetary Fund IMF and appraises innovations in exchange rate arrangements including the EMU and the use of currency boards by emerging market countries A problem set follows each chapter The International Economy and the Undeveloped World, 1865-1914

A. J. H. Latham,2006 Economic Historians generally consider the international economy through the lens of the most economically powerful nations This Western perspective distorts the true picture of how the international economy operates The International Economy and the Undeveloped World seeks to redress this fundamental bias and argues that Africa and Asia have a dramatic impact on the economies of the wealthier nations This volume concentrates on the role of developing nations in the 50 years preceding the first world war These regions it argues were instrumental in the evolution of the world economy Indeed it could not have evolved in the manner that it did without them Latham points to the fact that the so called free trade era was unsustainable without the developing countries without which Europe and America would have had to make fundamental readjustments This book was first published in 1978 **Constructing the International Economy**

Rawi Abdelal,Mark Blyth,Craig Parsons,2011-03-15 Focusing empirically on how political and economic forces are always mediated and interpreted by agents both in individual countries and in the international sphere Constructing the International Economy sets out what such constructions and what various forms of constructivism mean both as ways of understanding the world and as sets of varying methods for achieving that understanding It rejects the assumption that material interests either linearly or simply determine economic outcomes and demands that analysts consider as a plausible hypothesis that economies might vary substantially for nonmaterial reasons that affect both institutions and agents interests Constructing the International Economy portrays the diversity of models and approaches that exist among constructivists writing on the international political economy The authors outline and relate several different arguments for why scholars might attend to social construction inviting the widest possible array of scholars to engage with such approaches They

examine points of terminological or theoretical confusion that create unnecessary barriers to engagement between constructivists and nonconstructivist work and among different types of constructivism This book provides a tool kit that both constructivists and their critics can use to debate how much and when social construction matters in this deeply important realm
