The Income Inequality Hypothesis A Doctrine In Search Of Data:

Health and the Income Inequality Hypothesis Nick Eberstadt, 2004 Few would take exception to the proposition that an improvement in the material well being of the poor would enhance not only their living standards but their health as well. A number of influential recent studies however purport to show that inequality in income not poverty per se is bad for people's health. This inequality hypothesis is meant to apply to everyone regardless of wealth or social standing and predicts that the risk of illness depends upon whether one lives in a society that is stratified or egalitarian. Thus according to this hypothesis while the poor may suffer the most from inequality the better off and even the rich suffer as well. The enthusiasm many researchers and observers feel for this theory goes well beyond what might be justified by the evidence. The inequality hypothesis too often relies upon limited or unrepresentative data hastily expounded causality elementary econometric fallacies and results that cannot be replicated. A very persuasive although less publicly heralded body of scholarship that challenges the inequality hypothesis is currently emerging. For example by controlling for relevant variables such as household income maternal characteristics education and race the relationship between income inequality and the health of infants and adults diminishes or disappears completely. This strongly suggests that income distribution is far less powerful a determinant of population health than the inequality hypothesis holds. Book jacket

Health and the Income Inequality Hypothesis Nick Eberstadt, 2004 **Sociological Theories of Health and Illness** William C Cockerham, 2020-07-09

Sociological Theories of Health and Illness reviews the evolution of theory in medical sociology beginning with the field's origins in medicine and extending to its present day standing as a major sociological subdiscipline. Sociological theory has an especially important role in the practice of medical sociology because its theories distinguish the subdiscipline from virtually all other scientific fields engaged in the study of health and illness. The focus is on contemporary theory because it applies to contemporary conditions however since theory in sociology is often grounded in historical precedents and classical foundations this material is likewise included as it relates to medical sociology today. This book focuses on the most commonly used sociological theories in the study of health and illness illustrating their utility in current examples of empirical research on a wide range of topics. The qualitative or quantitative research methods applicable to specific theories are also covered. Distinctions between macro and micro level levels of analysis and the relevance of the agency structure dichotomy inherent in all theories in sociology are discussed. Beginning with classical theory Durkheim Weber and Marx and the neglected founders Gilman Martineau and DuBois along with symbolic interaction Mead Strauss and labeling theory Becker and poststructuralism and postmodernism Foucault coverage is extended to contemporary medical sociology. Discussion of the stress process model Pearlin is followed by the social construction of gender and race and intersectionality theory Collins health lifestyle theory Cockerham life course theory Elder fundamental cause theory Link and Phelan and theories of the medical profession Freidson medicalization and biomedicalization Conrad Clarke and social capital Bourdieu
