Neurobiology of Human Values Jean-Pierre P. Changeux, Antonio Damasio, Wolf Singer, 2006-03-30 Man has been pondering for centuries over the basis of his own ethical and aesthetic values Until recent times such issues were primarily fed by the thinking of philosophers moralists and theologists or by the findings of historians or sociologists relating to universality or variations in these values within various populations Science has avoided this field of investigation within the confines of philosophy Beyond the temptation to stay away from the field of knowledge science may also have felt itself unconcerned by the study of human values for a simple heuristic reason namely the lack of tools allowing objective study For the same reason researchers tended to avoid the study of feelings or consciousness until over the past two decades this became a focus of interest for many neuroscientists It is apparent that many questions linked to research in the field of neuroscience are now arising The hope is that this book will help to formulate them more clearly rather than skirting them The authors do not wish to launch a new moral philosophy but simply to gather objective knowledge for reflection Social and Moral Values Nancy Eisenberg, Janusz Reykowski, Ervin Staub, 2016-08-05 Originally published in 1989 this joint venture of American and Polish psychologists provides an international perspective on the psychological factors that make people attend to the well being of others and of society The individual sections focus on theoretical perspectives in the nature of values the development of positive values the place of values in various types of decisions the regulation of behaviors through values and the relation of values to behavioral outcomes and sociopolitical socioeconomic and historical perspectives on values **Human Values, Ethics, and Dignity in the Age of Artificial Intelligence** Chakraborty, Swati, 2025-03-19 In the age of artificial intelligence AI the intersection of human values ethics and dignity has become a critical discussion point As AI systems continue to influence decision making processes social dynamics and human interactions questions about the preservation of human dignity and ethical boundaries are evident While AI has the potential to enhance human capabilities it also raises complex issues related to privacy autonomy fairness and accountability Balancing innovation with the need to safeguard human values is essential to ensuring AI serves humanity in a way that respects individual rights and well being Further research is necessary to develop intelligent systems while creating a framework where these technologies align with human principles and values Human Values Ethics and Dignity in the Age of Artificial Intelligence explores the intersection of AI and human values ethics and dignity It delves into the ethical challenges and implications of AI technologies examining how these advancements impact our societal norms human rights and moral frameworks This book covers topics such as digital technology social justice and environmental science and is a useful resource for computer engineers government officials policymakers environmental scientists academicians and researchers
