The Initiation Of Dna Replication Proceedings:

The Initiation of DNA Replication Dan S Ray, 2012-12-02 The Initiation of DNA Replication contains the proceedings of the 1981 ICN UCLA Symposia on Structure and DNA Protein Interactions of Replication Origins held in Salt Lake City Utah on March 8 13 1981 The papers explore the initiation of DNA replication and address relevant topics such as whether there are specific protein recognition sites within an origin how many proteins interact at an origin and whether they interact in a specific temporal sequence or whether origins can be subdivided into distinct functional domains. The specific biochemical steps in DNA chain initiation and how they are catalyzed are also discussed This book is organized into six sections and comprised of 41 chapters The discussion begins by analyzing the replication origin region of the Escherichia coli chromosome and the precise location of the region carrying autonomous replicating function A genetic map of the replication and incompatibility regions of the resistance plasmids R100 and R1 is described and several gene products produced in vivo or in vitro from the replication region are considered The sections that follow focus on the DNA initiation determinants of bacteriophage M13 and of chimeric derivatives carrying foreign replication determinants suppressor loci in E coli and enzymes and proteins involved in initiation of phage and bacterial chromosomes. The final chapters examine the origins of eukaryotic replication This book will be of interest to scientists students and researchers in fields ranging from microbiology and molecular biology to biochemistry molecular genetics and physiology Biological Physics 2000, Proceedings Of The First Workshop Hans Frauenfelder, Leif Matsson, Virulh Sa-yakanit, 2001-09-20 Like inanimate matter biological matter is condensed though it may be more complex However a living cell is a chemically open system with biological functions that are often a nonstationary nonlinear type of collective phenomena driven by chemical reactants e g ATP GTP ligands and receptors The living cell and many of its subsystems are hence lyotropic systems depending on various reactant concentrations rather than the temperature Nonlocal and local correlations of the interacting molecules become the prerequisites for signal transduction This book constitutes the proceedings of the workshop entitled Biological Physics 2000
