Stochastic Models Of Buying Behavior:

Stochastic Models of Buying Behavior William F. Massy, David B. Montgomery, Donald G. Morrison, 1974-01 This is the first book on stochastic models of consumer buying behavior and indeed one of a relative few books dealing with original contribution to research for marketing management as opposed to textbooks published to date The purpose of the book is to present an integrated treatment of the authors research on the title subject Including the 15% or so of material discussing the work of others in the field and one chapter on statistical methodology the book covers almost all aspects of the field of stochastic process models of buyer behavior as it is known today Thus the book is both intensive in that it covers both the theoretical and empirical aspects of the authors models in detail and extensive in that it provides a comprehensive treatment of the general subject While all essential concepts of stochastic process and estimation theory are developed in the body of the work it assumes prior knowledge of mathematics through calculus and matrix algebra However every effort has been made to write for the practicing management scientist as well as the academic specialist The approach of the book is to develop in order the theory of successively more refined stochastic models of buyer behavior We begin with the heterogeneous Bernoulli model and then extend the treatment to a class of heterogeneous Markov processes The next two chapters deal with independent and contagious probability diffusion processes for explaining time changes in market shares The linear learning model is considered in the next chapter The treatment then shifts to stochastic market penetration models of which several different varieties are explored Empirical results from marketing applications are provided for nearly all the models Separate chapters on parameter estimation procedures and ways in which the models may be applied to management problems are provided early in the book Many of the models and empirical results presented in the book have never been published before and others have received only limited attention The general approach to stochastic model development and testing will serve to put the rather extensive but scattered literature on stochastic marketing models on a common footing Finally many of the models developed in the book should find applications in other branches of social science such as sociology or political science *Selected Aspects of Consumer Behavior*, 1977 **Consumer Behaviour Analysis:**

The behavioural basis of consumer choice Gordon R. Foxall, 2002 **Models of Buyer Behavior, Chapter 5** Donald E. Sexton, Jr., 2011-03-31 **History Of Marketing Science, The (Second Edition)** Russell S Winer, Scott A Neslin, 2023-06-16 The field of marketing science has evolved significantly in the last 70 years Throughout its rich history developments in this field have always been anchored on marketing phenomena that drew on economics statistics operations research and related disciplines This book reviews the accomplishments of notable marketing scientists in several research areas It emphasizes both the role and the importance that pioneers in marketing science have had in the rapid development of this field and honors those contributions This second edition of the book offers updates of the former chapters and six new chapters on emerging areas of marketing science including machine learning field experimentation methods and internet

marketing Combined with older areas of research like endogeneity services and market segmentation this book provides a road map for the development of 22 areas of marketing science which not only is useful from a historical perspective but also identifies important gaps in the literature which can provide an impetus for future research As such it provides an important resource for the main consumers of the academic marketing research literature doctoral students faculty and marketing science practitioners in consulting firms and companies

Urban Dynamics and Spatial Choice Behaviour J.

Hauer, Harry J.P. Timmermans, N. Wrigley, 2012-12-06 This book arises from The Fourth European Colloquium on Theoretical and Quantitative Geography which was held in Dordrecht, The Netherlands in September 1985 It contains a series of papers on spatial choice dynamics and dynamical spatial systems which were presented at the colloquium together with a few other solicited ones The book is intended primarily as a state of the art review of mainly European research on these two fast growing problem areas As a consequence of this decision the book contains a selection of papers that differs in terms of focus level of sophistication and conceptual background Evidently the dissemination of ideas and computer software is a time related phenomenon which in the European context is amplified by differences in language the profile of geography and the formal training of geographers The book reflects such differences It would have been impossible to produce this book without the support of the various European study groups on theoretical and quantitative geography Without their help the meetings from which this volume originates would not have been held in the first place We are also indebted to the Royal Dutch Academy of Science for partly funding the colloquium and to SISWO and TNO/JPSO for providing general support in the organisation of the conference

Mathematical Models in Marketing

Ursula H. Funke, 2013-04-17 Mathematical models can be classified in a number of ways e.g. static and dynamic deterministic and stochastic linear and nonlinear individual and aggregate descriptive predictive and normative according to the mathematical technique applied or according to the problem area in which they are used In marketing the level of sophistication of the mathematical models varies considerably so that a number of models will be meaningful to a marketing specialist without an extensive mathematical background To make it easier for the nontechnical user we have chosen to classify the models included in this collection according to the major marketing problem areas in which they are applied Since the emphasis lies on mathematical models we shall not as a rule present statistical models flow chart models computer models or the empirical testing aspects of these theories We have also excluded competitive bidding inventory and transportation models since these areas do not form the core of the marketing field

The History Of Marketing Science

Russell S. Winer, Scott A. Neslin, 2014-06-27 The field of marketing science has a rich history of modeling marketing phenomena using the disciplines of economics statistics operations research and other related fields Since it is roughly 50 years from its origins The History of Marketing Science is a timely review of the accomplishments of marketing scientists in a number of research areas Different research areas of marketing science such as Pricing Internet Marketing Diffusion Models

and Advertising are treated to a highly readable and easy to digest historical analysis by the contributing authors. Each chapter provides a chronological timeline of key historical developments in the area of marketing science covered. Readers of other disciplinary backgrounds outside of economics, statistics, and operations research will be more than able to appreciate the development of marketing science as a field of research and its pioneers through the book.
