Stochastic Man:

The Stochastic Man Robert Silverberg, 2014-04-01 Hugo and Nebula Award Finalist This tale of an encounter between a probability expert and a psychic is a treasure San Francisco Examiner Lew Nichols can predict the future Not see the future just make predictions based on research and statistics Nichols is damn good at it though and his accuracy makes him a valuable addition to Paul Quinn's political campaign for New York City Mayor and possibly the White House But when Nichols meets eccentric millionaire Martin Carvajal predictions suddenly seem petty and flippant You see Carvajal can actually see the future not trends not options a signal line of events stretching out ahead It's a gift Nichols can learn from this mentor but at what price Will knowing the future make the present meaningless

The Stochastic Man Robert Silverberg, 1987-07-01 In the twentieth century's final months Lew Nichols administrative assistant to New York City's mayor and expert in stochastic prediction comes under the influence of Martin Carvajal and develops full powers of seeing the ineluctable future

The Stochastic Man Robert Silverberg, 1978 *Psience Fiction* Damien Broderick, 2018-05-12 Science fiction has often been considered the literature of futuristic technology fantastic warfare among the stars or ruinous apocalypses on Earth The last century however saw through John W Campbell the introduction of psience fiction which explores such themes of mental powers as telepathy precognition of the future teleportation etc and symbolic machines that react to such forces The author surveys this long ignored literary shift through a series of influential novels and short stories published between the 1930s and the present This discussion is framed by the sudden surge of interest in parapsychology and its absorption not only into the SF genre but also into the real world through military experiments such as the Star Gate Program

Markovian Demand Inventory Models Dirk Beyer, Feng Cheng, Suresh P. Sethi, Michael Taksar, 2009-10-03 Inventory management is concerned with matching supply with demand and a central problem in Operations Management The problem is to find the amount to be produced or purchased in order to maximize the total expected profit or minimize the total expected cost Over the past two decades several variations of the formula appeared mostly in trade journals written by and for inventory managers A critical assumption in the inventory literature is that the demands in different periods are independent and identically distributed However in real life demands may depend on environmental considerations or the events in the world such as the weather the state of economy etc Moreover these events are represented by stochastic processes exogenous or controlled In Markovian Demand Inventory Models the authors are concerned with inventory models where these world events are modeled by Markov processes Their research on Markovian demand inventory models was carried out over a period of ten years beginning in the early nineties

Dynamic Games and Applications in Economics Tamer Başar, 1986-03 This volume contains eleven articles which deal with different aspects of dynamic and differential game theory and its applications in economic modeling and decision making All but one of these were presented as invited papers in special sessions I organized at the 7th Annual Conference on Economic Dynamics and Control in London England during

the period June 26 28 1985 The first article which comprises Chapter 1 provides a general introduction to the topic of dynamic and differential game theory discusses various noncooperative equilibrium solution concepts including Nash Stackelberg and Consistent Conjectural Variations equilibria and a number of issues such as feedback and time consistency The second chapter deals with the role of information in Nash equilibria and the role of leadership in Stackelberg problems A special type of a Stackelberg problem is the one in which one dominant player leader acquires dynamic information involving the actions of the others followers and constructs policies so called incentives which enforce a certain type of behavior on the followers Chapter 3 deals with such a class of problems and presents some new theoretical results on the existence of affine incentive policies The topic of Chapter 4 is the computation of equilibria in discounted stochastic dynamic games Here for problems with finite state and decision spaces existing algorithms are reviewed with a comparative study of their speeds of convergence and a new algorithm for the computation of nonzero sum game equilibria is presented

The Stochastic Man
Lloyd Robinson, 1976

Research Basins and Hydrological Planning R.Z. Xi, Wei-Zu Gu, Klaus-Peter Seiler, 2004-10-14 In the 20th century water management focused on the local scale of interest In the 21st century we will be facing changes in the quantity of our water cycle The forces behind these new challenges are industrialisation population growth and an insufficiently swift response to climatic change The magnitude and distribution of global changes are not exactly predictable because we live in an ever changing environment and are faced with extreme and interacting processes which all are not yet sufficiently understood Therefore to shoulder this task hydrology should embrace more integrative and interdisciplinary approaches and achieve more flexibility in assessments and decisions To better confront this challenge catchment related solutions are more important than local solutions to satisfy the water demand of agriculture ecosystems industry and the private sector It is wise to keep in mind that the environment has a sustainable memory and our knowledge about attenuation capacities and resilience of the environment is still low
