Damico, Lamont W. Curtis, APWA Water Resource

Management Committee, 2021-03-03 Is your agency feeling the financial pinch of compliance with NPDES regulations Are you looking for a dependable and equitable approach to financing your stormwater management Find out why and how an estimated 500 communities and regional governments have turned to the utility approach Local officials need information and guidelines to make informed decisions about stormwater utility creation This publication defines stormwater utilities and their potential for revenue generation is summarized The most frequently asked questions about revenue generation legalities administration and management are answered alongside subsequent sections concerning the rationale behind general utility planning establishing rate structures and estimating user charges The APWA recommends this resource to help with preparation for the Certified Stormwater Manager examination It should not be inferred that questions in the examination are selected from any single reference or set of references or that study from specific references guarantees a passing score on the examination Design and Construction of Urban Stormwater Management Systems American Society

of Civil Engineers, 1993-01-01 Prepared by the Task Committee of the Urban Water Resources Research Council of ASCE Copublished by ASCE and the Water Environment Federation Design and Construction of Urban Stormwater Management Systems presents a comprehensive examination of the issues involved in engineering urban stormwater systems This Manual which updates relevant portions of Design and Construction of Sanitary and Storm Sewers MOP 37 reflects the many changes taking place in the field such as the use of microcomputers and the need to control the quality of runoff as well as the quantity Chapters are prepared by authors with experience and expertise in the particular subject area The Manual aids the practicing engineer by presenting a brief summary of currently accepted procedures relating to the following areas financial services regulations surveys and investigations design concepts and master planning hydrology and water quality storm drainage hydraulics and computer modeling Stormwater Ben Urbonas, Peter Stahre, 1993 Fully revised and

updated this second edition shows how to use new methods for controlling stormwater runoff Contains up to date information on the latest developments in watershed and wetland detention past management practices new sizing calculations as well as numerous complete designs based on actual working detention facilities On the job advice is aimed at civil environmental and construction engineers surveyors stormwater managers or anyone involved with runoff control *Stormwater Management*

for Transportation Facilities Shaw L. Yu, 1993 This synthesis will be of interest to highway design engineers maintenance engineers environmental personnel administrators and others responsible for the design operation and maintenance of stormwater management for highways and ancillary facilities Information is presented on the basic hydrology needed to assess stormwater impacts and on the effectiveness of stormwater management techniques Designers of highway facilities must consider stormwater management requirements within the context of both localized runoff impacts as well as downstream effects of runoff This report of the Transportation Research Board describes the management of both stormwater quantity and stormwater quality Stormwater quantity includes an overview of methods of estimating runoff and management control practices Stormwater quality management includes discussions of the most prevalent pollutants and best management practices BMP to minimize pollutants from transportation facilities Various types of structural and non structural methods are described including their design considerations and efficiencies Several stormwater management models are described with special concern for highway applications Highlights from the 1990 National Pollutant Discharge Elimination System NPDES permits are presented

Urban Stormwater Management in the United States Committee on Reducing Stormwater Discharge Contributions to Water Pollution, National Research Council, 2009-02-17 The rapid conversion of land to urban and suburban areas has profoundly altered how water flows during and following storm events putting higher volumes of water and more pollutants into the nation's rivers lakes and estuaries These changes have degraded water quality and habitat in virtually every urban stream system The Clean Water Act regulatory framework for addressing sewage and industrial wastes is not well suited to the more difficult problem of stormwater discharges This book calls for an entirely new permitting structure that would put authority and accountability for stormwater discharges at the municipal level A number of additional actions such as conserving natural areas reducing hard surface cover e.g. roads and parking lots and retrofitting urban areas with features that hold and treat stormwater are recommended

Stormwater Will Wilson, 2016-07-15 In February sitting under nearly 80 inches of snow residents of Boston dreamed of the great melt But city planners were less excited especially those working with the EPA For with every great storm snow or rain eventually comes buckets of stormwater The rivers of urban runoff from man-made surfaces roads freeways sidewalks roofed structures parking lots airports and industrial sites among others are teeming with all sorts of debris oil grease pesticides road salts metals bacteria and viruses and toxic chemicals from automobiles among others Urban terrain unlike soil does not have the ability to filter or biodegrade contaminants like natural soil does And the threat to human health by urban runoff is not only due to materials scoured from surfaces but also from the infrastructure of the sewer system itself Stormwater systems are often combined with sanitary sewer systems en route to sewage treatment plants Excessive stormwater can cause this joint system to overflow resulting in sewage contamination of waterways Urban runoff is usually collected by storm sewers and discharged directly into waterways and many sources of discharge go uncontrolled and untreated Constructed Creeks is the
