

# STORMWATER DETENTION BASINS

There are two things we can do with stormwater to help reduce the risk of flooding in a given area. We can move stormwater more quickly by channel modifications or we can store it in stormwater detention basins.

Stormwater can fill a detention basin in several ways. This illustration is showing water overflowing into a detention basin, from a bayou, by way of a weir structure. All of our structures are passive designs that utilize gravity to operate.

Stormwater detention basins are built to store excess stormwater until it can make its way safely back into the channel.

As the water levels in the bayou recede, the stormwater from the basin flows by gravity through the outfall pipe back into the channel and then ultimately to Galveston Bay.
