The Medical Interview A Primer For Students Of The Art:

The Medical Interview John L. Coulehan, Marian R. Block, 1992 **The Medical Interview** Mack Jr. Lipkin, J.G. Carroll, R.M. Frankel, Samuel M. Putnam, Aaron Lazare, A. Keller, T. Klein, P.K. Williams, 2012-12-06 Primary care medicine is the new frontier in medicine Every nation in the world has recognized the necessity to deliver personal and primary care to its people This includes first contact care care based in a positive and caring personal relationship care by a single healthcare provider for the majority of the patient's problems coordination of all care by the patient's personal provider advocacy for the patient by the provider the provision of preventive care and psychosocial care as well as care for episodes of acute and chronic illness These facets of care work most effectively when they are embedded in a coherent integrated approach The support for primary care derives from several significant trends First technologically based care costs have rocketed beyond reason or availability occurring in the face of exploding populations and diminishing real resources in many parts of the world even in the wealthier nations Simultaneously the primary care disciplines general internal medicine and pediatrics and family medicine have matured significantly *Sapira's Art & Science of Bedside Diagnosis* Jane M. Orient, Joseph D. Sapira, 2010 This fourth edition teaches the artful science of the patient interview and the physical examination Clinical pearls vignettes step by step methods and explanations of the physiologic significance of findings are included along with a companion Web site **Sapira's Art & Science of Bedside Diagnosis** Jane Orient, 2018-03-08 Essential reading for beginning and experienced clinicians alike Sapira's Art Science of Bedside Diagnosis Fifth Edition discusses the patient interview and the physical examination in an engaging storytelling style Tried and true methods are described in step by step detail and include clinical pearls vignettes practical clinical experiences personal history explanations of the physiologic significance of findings and extensive discussions of evidence based medicine It's a useful guide for learning and reinforcing effective bedside diagnosis techniques at all levels and stages of clinical practice

Cassell, 2002 Addressing

the problems facing medicine and medical education Cassell discusses the new generalism and the skills that physicians in training must be taught in order to practice the art of doctoring which centres on the person not the disease **Doctoring**

Eric J. Cassell M.D., 2002-11-14 American medicine attracts some of the brightest and most motivated people the country has to offer and it boasts the most advanced medical technology in the world a wondrous parade of machines and techniques such as PET scans MRI angioplasty endoscopy bypasses organ transplants and much more besides And yet writes Dr Eric Cassell what started out early in the century as the exciting conquest of disease has evolved into an overly expensive over technologized uncaring medicine poorly suited to the health care needs of a society marked by an aging population and a predominance of chronic diseases In *Doctoring The Nature of Primary Care Medicine* Dr Cassell shows convincingly how much better fitted advanced concepts of primary care medicine are to America's health care needs He offers valuable insights into how primary care physicians can be better trained to meet the needs of their patients both well and sick and to keep these patients as the focus of their practice Modern medical training arose at a time when medical science was in ascendancy Cassell notes Thus the ideals of science objectivity rationality became the ideals of medicine and disease the target of most medical research became the logical focus of medical practice When clinicians treat a patient with pneumonia they are apt to be thinking about pneumonia in general which is how they learn about the disease rather than this person's pneumonia This objective rational approach has its value but when it dominates a physician's approach to medicine it can create problems For instance treating chronic disease such as rheumatoid arthritis diabetes stroke emphysema and congestive heart failure is not simply a matter of medical knowledge for it demands a great deal of effort by the patients themselves they have to keep their doctor appointments take their medication do their exercises stop smoking The patient thus has a profound effect on the course of the disease and so for a physician to succeed he or she must also be familiar with the patient's motivations values concerns and relationship with the doctor Many doctors eventually figure out how to put the patient at the center of their practice but they should learn to do this at the training level not haphazardly over time To that end the training of primary care physicians must recognize a distinction between doctoring itself and the medical science on which it is based and should try to produce doctors who rely on both their scientific and subjective assessments of their patients overall needs There must be a return to careful observational and physical examination skills and finely tuned history taking and communication skills Cassell also advocates the need to teach the behavior of both sick and well persons evaluation of data from clinical epidemiology decision making skills and preventive medicine as well as actively teaching how to make technology the servant rather than the master and offers practical tips for instruction both in the classroom and in practice Most important *Doctoring* argues convincingly that primary care medicine should become a central focus of America's health care system not merely a cost saving measure as envisioned by managed care organizations Indeed Cassell shows that the primary care physician can fulfill a unique role in the medical community and a vital role in society in general He

shows that primary care medicine is not a retreat from scientific medicine but the natural next step for medicine to take in the coming century

Caring for Patients Allen Barbour,1997-07-01 An experienced and compassionate physician questions the prevailing medical model of patient care that every illness has a physical cause that can be identified and treated medically and argues for the necessity of taking the psychological and social situation of the patient into account in the process of diagnosis and treatment

Basic Interviewing Skills Raymond L. Gorden,1998-05-22 Interviewing skills are not simple motor skills Rather they involve a high order combination of observation empathic sensitivity and intellectual judgment This guidebook now available from Waveland Press provides a process model and a corresponding set of classroom tested exercises designed to improve basic interviewing skills The model called the Skill Learning Cycle provides an initial guided experience for the complete interview learning process including planning doing and analyzing phases It also stands as a model for the student to use in the future for continued growth in interviewing skills In order to focus on the most basic interviewing skills only the information gathering function which is common to all interviews is discussed

The Neuropsychology of Women Elaine Fletcher-Janzen,2008-12-19 The Diversity in Clinical Neuropsychology series is designed to highlight cultural and moderator variables involved in the study of brain behavior relationships Historically the study of psychology and neuropsychology has focused on the male brain being the standard to which all or most variables are considered The study of sex differences is perhaps the most provoking and far reaching aspect of diversity because frequently women have unique assessment and treatment needs For example frontal lobe functioning tends to be more contextual for women than for men These brain functions have behavioral counterparts that directly relate to how interventions may be tailor made to suit the female rather than male patient The goal in neuropsychology is always to improve diagnosis and treatment outcomes and a cohesive summary of the neuropsychology of the female brain would raise awareness and cultural competency of clinicians in neuropsychology Authors will focus on sex differences in the neuropsychological cognitive and development literature ethnic and socioeconomic variables affecting diagnosis and treatment of women and social emotional and behavioral manifestations of neuropsychological sex differences
