The Measurement of Starlight J. B. Hearnshaw, 1996-05-02 A well illustrated historical survey of the science of measuring the brightness and colours of stars for professional astronomers amateur astronomers and historians of science

Astronomical Photometry Eugene F. Milone, C. Sterken, 2011-04-06 This book will bring together experts in the field of astronomical photometry to discuss how their subfields provide the precision and accuracy in astronomical energy flux measurements that are needed to permit tests of astrophysical theories Differential photometers and photometry improvements in infrared precision the improvements in precision and accuracy of CCD photometry the absolute calibration of flux the development of the Johnson UBVRI photometric system and other passband systems to measure and precisely classify specific types of stars and astrophysical quantities and the current capabilities of spectrophotometry and polarimetry to provide precise and accurate data will all be discussed in this volume The discussion of differential or two star photometers will include those developed for planetary as well as stellar photometry and will range from the Princeton polarizing photometer through the pioneering work of Walraven to the differential photometers designed to measure the ashen light of Venus and to counter the effects of aurorae at high latitude sites the last to be discussed will be the Rapid Alternate Detection System RADS developed at the University of Calgary in the 1980s

The Glass Universe Dava Sobel, 2017-10-31 From 1 New York Times bestselling author Dava Sobel the inspiring People little known true story of women s landmark contributions to astronomy A New York Times Book Review Notable Book Named one of the best books of the year by NPR The Economist Smithsonian Nature and NPR s Science Friday Nominated for the PEN E O Wilson Literary Science Writing Award A joy to read The Wall Street Journal In the mid nineteenth century the Harvard College Observatory began employing women as calculators or human computers to interpret the observations their male counterparts made via telescope each night At the outset this group included the wives sisters and daughters of the resident astronomers but soon the female corps included graduates of the new women s colleges Vassar Wellesley and Smith As photography transformed the practice of astronomy the ladies turned from computation to studying the stars captured nightly on glass photographic plates The glass universe of half a million plates that Harvard amassed over the ensuing decades through the generous support of Mrs Anna Palmer Draper the widow of a pioneer in stellar photography enabled the women to make extraordinary discoveries that attracted worldwide acclaim They helped discern what stars were made of divided the stars into meaningful categories for further research and found a way to measure distances across space by starlight Their ranks included Williamina Fleming a Scottish woman originally hired as a maid who went on to identify ten novae and more than three hundred variable stars Annie Jump Cannon who designed a stellar classification system that was adopted by astronomers the world over and is still in use and Dr Cecilia Helena Payne who in 1956 became the first ever woman professor of astronomy at Harvard and Harvard s first female department chair Elegantly written and enriched by excerpts from letters diaries and

memoirs The Glass Universe is the hidden history of the women whose contributions to the burgeoning field of astronomy forever changed our understanding of the stars and our place in the universe **A History of Light and Colour**

Shepard, 2017-04-27

Introducing planetary photometry as a quantitative remote sensing tool this handbook demonstrates how reflected light can be measured and used to investigate the physical properties of bodies in our Solar System The author explains how data gathered from telescopes and spacecraft are processed and used to infer properties such as the size shape albedo and composition of celestial objects including planets moons asteroids and comets Beginning with an overview of the history and background theory of photometry later chapters delve into the physical principles behind commonly used photometric models and the mechanics of observation data reduction and analysis Real world examples problems and case studies are included all at an

problems are met and overcome are described in the third article Various aspects of our solar system are covered by authoritative articles on the Sun planets including their satellites and smaller bodies plus a review of the laws of motions and orbits of celestial bodies The detection and studies of exo solar planetary systems is rapidly developing field in astronomy which is treated in a separate chapter Then follow fascinating up to date overviews on stars describing their formation structure and life cycles Stars are the building blocks of larger cosmic entities leading to the enigmatic galaxies composed of billions of stars and gradually to clusters of galaxies The final chapters cover the origin and evolution of galaxies and the large scale structure of the Universe including dark matter and dark energy which are among the most fascinating problems of physics today These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Advancing Variable Star Astronomy Thomas R. Williams, Michael Saladyga, 2011-05-26 Founded in 1911 the AAVSO boasts over 1200 members and observers and is the world's largest non profit organization dedicated to variable star observation This timely book marks the AAVSO's centennial year presenting an authoritative and accurate history of this important association Writing in an engaging and accessible style the authors move chronologically through five eras of the AAVSO discussing the evolution of its structure and purpose Throughout the text the main focus is on the thousands of individuals whose contributions have made the AAVSO's progress possible Describing a century of interaction between amateur and professional astronomers the authors celebrate the collaborative relationships that have existed over the years As the definitive history of the first hundred years of the AAVSO this text has broad appeal and will be of interest to amateur and professional astronomers as well as historians and sociologists of science in general
