The Meiotic Mechanism:

The Meiotic Mechanism Bernard John, 1973 The Meiotic System Bernard John, Kenneth R. Lewis, 2012-12-06

Introduction When the study of heredity and variation first came to be treated as a scientific subject and this one must remember was only just over a hundred years ago there was an unfortunate separation between the disciplines of cytology and experimental breeding This separation was based partly on a lack of understanding and partly on a lack of the desire to understand Even WILLIAM BATESON the first apostle of mendelism in England had a blind spot for cytology and for many years dogmatically refused to believe that MENDEL'S determinants were transmitted and distributed by the chromosomes This separation between cytology and experimental breeding is one which persists in a measure even today simply because there are two quite different though complementary techniques available for the study of heredity and variation On the one hand one can study directly the structure and behaviour of the actual vehicles which transmit the genetic determinants from one generation to the next This is the method employed by those who study genetics through a microscope The alternative method is that used by the experimental breeder who in default of being able to watch the hereditary factors segregate from each other directly is obliged to examine the constitution of the germ cells indirectly by sampling and usually at random the products of a controlled mating *Oxford Biology Readers: John, B. and Lewis, K.R. Kappas, 2012-12-06 The 19th annual meeting of the European Environmental Mutagen Society was held in Rhodes Greece from October 21st to 26th 1989 The programme was chosen to explore what is currently known about the mechanisms of mutagenesis and carcinogenesis induced by environmental agents and the questions regarding the relationship of these two processes Recent findings techniques and methodologies in the area of biomonitoring of humans exposed to environmental mutagens carcinogens were presented and considerable attention was also paid to the aspects and issues of collaborative environmental policy Researchers from all over the world contributed to the programme of the meeting with posters and oral presentations providing a variety of new data and interesting scientific approaches A number of outstanding scientists were invited to present the results of their work It is only their presentations which are included in this book covering the following topics Mutations and carcinogenesis mechanisms of chemically induced genetic effects on molecular chromosomal and cell division level adaptability and repair mechanisms chemical carcinogenesis and oncogenes structure and metabolism of mutagens carcinogens biomonitoring and epidemiology of humans exposed to environmental mutagens carcinogens For the sake of evaluating and controlling the mutagenic and carcinogenic potential of our environment it is indispensable to understand the mechanisms and processes by which chemicals act on the genetic

Cells: Molecules and Mechanisms Eric Wong, 2009 Yet another cell and molecular biology book At the very least you would think that if I was going to write a textbook I should write one in an area that really needs one instead of a subject that already has multiple excellent and definitive books So why write this book then First it's a course that I have enjoyed teaching for many years so I am very familiar with what a student really needs to take away from this class within the time constraints of a semester Second because it is a course that many students take there is a greater opportunity to make an impact on more students pocketbooks than if I were to start off writing a book for a highly specialized upper level course And finally it was fun to research and write and can be revised easily for inclusion as part of our next textbook
