The Microbiologist And Biological Defense Research Ethics Politics And International Security:

The Microbiologist and Biological Defense Research Raymond A. Zilinskas, 1992 The Microbiologist and Biological Defense Research Raymond A. Zilinskas, 1992 This volume outlines the issues raised by the military's support of biological defence research presenting divergent views of the psychological historical ethical social legal and scientific aspects of society's attempts to protect itself from biological weapons and warfare It is the outcome of a conference held April 4-5 1991 and sponsored by the Center for Public Issues in Biotechnology Maryland Biotechnology Institute the Center for the History of Microbiology ASM Archives the University of Maryland Baltimore County and Physicians for Human Rights The Soviet Biological Weapons Program Milton Leitenberg, Raymond A Zilinskas, Jens H Kuhn, 2012-06-29 This is the first attempt to understand the full scope of the USSR's offensive biological weapons research from inception in the 1920s Gorbachev tried to end the program but the U S and U K never obtained clear evidence that he succeeded raising the question whether the means for waging biological warfare could be present in Russia today Biological Warfare Raymond A. Zilinskas, 2000 Recent revelations about Iraqi and Soviet Russian biological weapons programs and highly publicized events such as the deployment of anthrax and botulinum by the Aum Shinrikyo sect in Japan have made clear the necessity for addressing the issues of biological warfare and defense In a comprehensive analysis of this imminent threat to global security fourteen internationally recognized authorities consider the motivations of governments and terrorist groups seeking to acquire biological weapons managing the consequences of a biological attack techniques for weapons development methods for detection of pathogens and toxins defense against biological weapons and international efforts to counter their proliferation

Biological Warfare D.B. Rao, 2001 The population of the world of today is faced by a challenge that could threaten even its survival in the near future because of biological weapons and warfare Biological weapons are not difficult to produce relatively easy to hide and in the hands of unscrupulous desperate terrorists could cause incredible damage to large populations anywhere in the world The use of biological weapons in war and or otherwise as a means of mass destruction may lead to manmade epidemics that will introduce bioengineered agents into the human populations animals and plants which will have a devastating effect on living organisms and world economy Confronted with this menace the Biological Weapons Convention has singled out biological weapons for categorical prohibition To protect humans animals and plants from microbial diseases a revolutionary approach to develop effective vaccines against epidemic causing agents and certainly against biological weapon agents is needed **The United States and Biological Warfare** Stephen Endicott, Edward Hagerman, 1998-11-22 The United States and Biological Warfare is a major contribution to our understanding of the past involvement by the US and Japanese governments with BW with important crucial implications for the future Pieces of this story including the Korean War allegations have been told before but never so authoritatively and with such a convincing foundation in historical research This is a brave and significant scholarly contribution on a matter of great importance to the

future of humanity Richard Falk Albert G Milbank Professor of International Law and Practice Princeton University The United States and Biological Warfare argues persuasively that the United States experimented with and deployed biological weapons during the Korean War Endicott and Hagerman explore the political and moral dimensions of this issue asking what restraints were applied or forgotten in those years of ideological and political passion and military crisis For the first time there is hard evidence that the United States lied both to Congress and the American public in saying that the American biological warfare program was purely defensive and for retaliation only The truth is that a large and sophisticated biological weapons system was developed as an offensive weapon of opportunity in the post World War II years From newly declassified American Canadian and British documents and with the cooperation of the Chinese Central Archives in giving the authors the first access by foreigners to relevant classified documents Endicott and Hagerman have been able to tell the previously hidden story of the extension of the limits of modern war to include the use of medical science the most morally laden of sciences with respect to the sanctity of human life They show how the germ warfare program developed collaboratively by Great Britain Canada and the United States during the Second World War together with information gathered from the Japanese at the end of World War II about their biological warfare technology was incorporated into an ongoing development program in the United States Startling evidence from both Chinese and American sources is presented to make the case An important book for anyone interested in the history and morality of modern warfare *The Implementation of Legally Binding Measures to Strengthen the Biological and Toxin Weapons Convention* Marie Isabelle Chevrier, Krzysztof Chomiczewski, Henri Garrigue, Gyorgy Granasztói, Malcolm R. Dando, G.S. Pearson, 2006-04-11 Incidents of bioterrorism and biowarfare are likely to recur leading to increased public concern and government action The deficiencies of the Biological and Toxin Weapons Convention BTWC are in urgent need of attention the BTWC is the central international agreement to prevent the proliferation of biological warfare programmes Uniquely this book is written by diplomats involved in the decade long effort 1991 2001 in which State Parties to the BTWC tried to agree a Protocol to the Convention with legally binding measures to strengthen its effectiveness and academics concerned with the negotiations Just before negotiations foundered when the Chairman's proposed text was virtually complete the problems and proposed solutions were examined thoroughly leading to this book The book is wide ranging in its review of the history of biological warfare the reasons why the current biological revolution is of such concern and the main features of the BTWC itself The core of the book examines the key elements of the proposed protocol declarations visits challenge type investigations and enhanced international cooperation and the implications for government industry and biodefence giving us all a better understanding of what still remains to be done to avert a biowarfare catastrophe *Learning With Professionals: Selected Works from the Joint Military Intelligence College* Joint Military Intelligence College, 2010-04-19 Learning With Professionals Selected Works from the Joint Military Intelligence College is a collection of writings by present or former faculty and students at the Joint Military Intelligence
