Shock Wave Lithotripsy James Lingeman, 2013-06-29 Extracorporeal shock wave lithotripsy ESWL arrived in the United States in February of 1984 with explosive impact in the field of urology The first ESWL treatment in the United States with the Dornier H device occurred at the Methodist Hospital of Indiana and by the end of 1984 In spite of the rapidly the United States ESWL study group had accrued over 2 5 ESWL treatments accumulated experience at the six institutions involved in the FDA trial of the Dornier HM device other urologists in this country and around the world had little opportunity to gain knowledge about the utilization of this revolutionary technique For this reason the Methodist Hospital of Indiana organized the first symposium on shock wave lithotripsy in February of 1985 Interest in this meeting was intense as approval of the Dornier device had occurred only a few weeks earlier in December of 1984 Because of the success of this initial meeting subsequent meetings have been held annually in Indianapolis Following the third annual symposium on extracorporeal shock wave lithotripsy in March of 1987 a number of participants and attendees requested that the information presented at the meeting be made available Therefore plans were made to publish the proceedings of the next meeting which occurred March 5 and 6 1988 The Methodist Hospital of Indiana's 4th Symposium on Shock Wave Lithotripsy State of the Art was the best attended meeting to date with over 650 registrants from 36 states and 24 countries

Ultrasonic Surgical Techniques for the Pelvic Surgeon Janet S. Rader, Neil B. Rosenshein, 2012-12-06 Ultrasonic surgical techniques were first used by Dr Kelman in the 1960s to fragment cataracts through a 2 mm incision allowing for minimally invasive surgery The results from this procedure stimulated the development of a larger more powerful ultrasonic unit that was used in neurosurgery This instrument allowed the neurosurgeon to selectively remove tumor tissue with decreased blood loss and tissue trauma The ability now of ultrasonic equipment to selectively fragment irrigate and aspirate tissue with minimal coagulation effect spurred its rapid use in surgery on the liver spleen kidney and other intra abdominal organs This instrument has been invaluable in ovarian cancer cytoreduction and intricate segmental organ resection The newest technical developments include electro cautery capability built into the hand piece and extended hand pieces for laparoscopic

surgery The impetus for assembling this volume has been to provide an extensive review of the field of ultrasonic surgery as it has currently developed including principles equipment features and surgical techniques It is hoped that the information will be of use to physicians in training and surgeons in practice The book takes a multidisciplinary approach with chapters authored by a diversity of subspecialists in general surgery urology surgical oncology and gynecologic oncology Each chapter contains basic information on surgical techniques Together these chapters cover surgery of the GI tract kidney liver and lower genital tract and present a number of personal approaches
