Blazev, 2021-01-07 Natural and man made changes in the environment create a very complex picture This book analyzes this picture and provides snapshots of different areas of interest and to make suggestions for future work on cleaning and stabilizing the Earth's environment Starting with conventional energy generation and moving on to renewable energies this book analyzes and calculates their environmental impact and the lesser known aspects of their cradle to grave life cycle such as the irreversible environmental damage done during the manufacturing of solar and wind equipment and during the installation operation and decommissioning of large scale hydro solar and wind power plants *Summary of John Doerr's Speed and Scale* Everest Media, 2022-04-17T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 In 2007 Kleiner Perkins was approached by engineers who had named their startup after Nikola Tesla the legendary inventor They had partnered with a wildly successful PayPal entrepreneur who was now chairman of the board They wanted to pitch their idea 2 The world must replace all gasoline and diesel powered vehicles with a fleet of zero emissions cars trucks and buses by 2050 The electrification of transportation is already under way but the technology we need to scale is behind schedule We must accelerate 3 If EVs are to capture the majority of the passenger car market they must be broadly affordable When people spend more to buy a green product over one that emits more carbon they're paying a green premium 4 To get to net zero we'll need better performance at comparable prices In this context the green premium is a rough measure of the difficulty of each problem of how far we have to go to reach net zero **Net-Zero and Low Carbon Solutions for the Energy Sector** Amin Mirkouei, 2024-02-23 Net Zero and Low Carbon Solutions for the Energy Sector Guide to choosing and investing in decarbonization technologies for the energy sector Net Zero and Low Carbon Solutions for the Energy Sector proposes mature high technology readiness level net zero and low carbon pathways and technologies in the energy sector discussing net near zero solutions for producing and storing power heat biofuel and hydrogen and highlighting various pathways and processes to achieve net zero targets and address climate concerns Each chapter provides a relevant case study to aid in the practical application of concepts covering decarbonization solutions that have high potential to be used in the near future such as solar hybrid systems for net zero power generation CCUS hybrid systems for low carbon power generation pumped hydropower for power storage commercial concentrating solar power plants for heat generation gasification with CCUS for biofuel production hybrid thermochemical process for hydrogen production and more Written from the perspective of firsthand research experience in the field this book includes information on Net zero power generation via solar wind hydropower geothermal hydrogen and marine processes Near zero power generation via nuclear coal natural gas biomass and ammonia processes Mechanical and battery based power storage and heat storage via physical and thermochemical processes Near zero heat generation processes and biofuels production including biogas biomethane

bioethanol and biodiesel Hydrogen production via electrolysis and thermochemical processes with CCUS and low emission technologies for hydrogen storage Net Zero and Low Carbon Solutions for the Energy Sector is a valuable resource for business professionals academics and policy makers who are active in contributing to net zero emissions targets for keeping the atmospheric CO2 levels in an acceptable range Energy ,1983 *Summary of John Doerr's Speed & Scale* Everest Media,2022-08-29T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 Adapted from data and visuals by BloombergNEF Tesla was selling one of every five electric vehicles worldwide by 2019 In 2020 it sold half a million 2 To achieve our goal of electrifying transportation by 2050 we must replace all gasoline and diesel powered vehicles with a fleet of zero emissions cars trucks and buses 3 If EVs are to capture the majority of the passenger car market they must be broadly affordable When people spend more to buy a green product over one that emits more carbon they re paying a green premium which is a term I heard from Bill Gates 4 Early adopters and concerned citizens alone won t get us to net zero We ll need better performance at comparable prices to guarantee a market swing to electric vehicles
