The Mendelian Revolution The Emergence Of Hereditarian Concepts In Modern Science And Society:

The Mendelian Revolution Peter J. Bowler, 2015-11-19 An introduction to the history of genetics and the rethinking of evolutionism

The Graft Hybrid Matthew Holmes, 2024-04-16 The global triumph of Mendelian genetics in the twentieth century was not a foregone conclusion thanks to the existence of graft hybrids These chimera plants and animals are created by grafting tissue from one organism to another with the goal of passing the newly hybridized genetic material on to their offspring But prevailing genetic theory insisted that heredity was confined to the sex cells and there was no inheritance of characteristics acquired during an organism's lifetime Under sustained attacks from geneticists scientific belief in the existence of graft hybrids slowly began to decline Yet ordinary horticulturalists and breeders continued to believe in the power of grafting Matthew Holmes tells the story of these organisms which include multicolored chickens and black nightshades that grew tomatoes and their enduring influence on twentieth century biology Their creators sought a goal as ambitious as the wildest dreams of genetic engineering today to smash the barriers between species and freely exchange genes between organisms The Graft Hybrid presents a greater understanding of the controversial history of graft hybrids offering a crucial intervention in the history of genetics and the future of biological science

Philosophy, Biology and Life Anthony O'Hear, 2005-11-28 Demonstrates that biology and its underlying philosophy are in a state of development defying standard stereotypes

Sex Radicals and the Quest for Women's Equality Joanne Ellen Passet, 2003 Passet shows that the majority of correspondents who participated in the sex radical movement resided in the Midwest and the Great Plains states where ideas of individual freedom and sovereignty resonated particularly strongly

The Oxford Illustrated History of Science Iwan Rhys Morus, 2017-06-16 The Oxford Illustrated History of Science is the first ever fully illustrated global history of science from Aristotle to the atom bomb and beyond The first part of the book tells the story of science in both East and West from antiquity to the Enlightenment from the ancient Mediterranean world to ancient China from the exchanges between Islamic and Christian scholars in the Middle Ages to the Chinese invention of gunpowder paper and the printing press from the Scientific Revolution of sixteenth and seventeenth century Europe to the intellectual ferment of the eighteenth century The chapters that follow focus on the increasingly specialized story of science since end of the eighteenth century covering experimental science in the laboratory from Michael Faraday to CERN the exploration of nature from intrepid Victorian explorers to twentieth century primatologists the mapping of the universe from the discovery of Uranus to Big Bang theory the impact of evolutionary ideas from Lamarck Darwin and Wallace to DNA and the story of theoretical physics from James Clark Maxwell to Quantum Theory and beyond A concluding chapter reflects on how scientists have communicated their work to a wider public from the Great Exhibition of 1851 to the internet in the early twenty first century

[The Religion of Life](#) Sarah Walsh, 2022-01-25 The Religion of Life examines the interconnections and relationship between Catholicism and eugenics in early twentieth century Chile Specifically it demonstrates that the popularity of eugenic

science was not diminished by the influence of Catholicism there In fact both eugenics and Catholicism worked together to construct the concept of a unique Chilean race la raza chilena A major factor that facilitated this conceptual overlap was a generalized belief among historical actors that male and female gender roles were biologically determined and therefore essential to a functioning society As the first English language study of eugenics in Chile The Religion of Life surveys a wide variety of different materials periodicals newspapers medical theses and monographs produced by Catholic and secular intellectuals from the first half of the twentieth century What emerges from this examination is not only a more complex rendering of the relationship between religion and science but also the development of White supremacist logics in a Latin American context

Breeding Better Vermonters Nancy L. Gallagher, 1999 The disturbing story of eugenics in Vermont and the dark side of progressive social reform

Heredity Explored Staffan Muller-Wille, Christina Brandt, 2016-07-29 Investigations of how the understanding of heredity developed in scientific medical agro industrial and political contexts of the late nineteenth and early twentieth centuries This book examines the wide range of scientific and social arenas in which the concept of inheritance gained relevance in the late nineteenth and early twentieth centuries Although genetics emerged as a scientific discipline during this period the idea of inheritance also played a role in a variety of medical agricultural industrial and political contexts The book which follows an earlier collection *Heredity Produced* covering the period 1500 to 1870 addresses heredity in national debates over identity kinship and reproduction biopolitical conceptions of heredity degeneration and gender agro industrial contexts for newly emerging genetic rationality heredity and medical research and the genealogical constructs and experimental systems of genetics that turned heredity into a representable and manipulable object Taken together the essays in *Heredity Explored* show that a history of heredity includes much more than the history of genetics and that knowledge of heredity was always more than the knowledge formulated as Mendelism It was the broader public discourse of heredity in all its contexts that made modern genetics possible Contributors Caroline Arni Christophe Bonneuil Christina Brandt Luis Campos Jean Paul Gaudilliere Bernd Gausemeier Jean Gayon Veronika Lipphardt Ilana Lwy J Andrew Mendelsohn Staffan Muller Wille Diane B Paul Theodore M Porter Alain Pottage Hans Jorg Rheinberger Marsha L Richmond Helga Satzinger Judy Johns Schloegel Alexander von Schwerin Hamish G Spencer Ulrike Vedder
