The Science of Alpine Ski Racing is the first book to discuss the science coaching research and training of elite to recreational alpine ski racers for optimal performance. This book brings together the complex physiological, biomechanical, and technical components of the sport in a practical manner with which coaches and researchers alike can adopt to elicit better performance outcomes for athletes. Literature of this kind has never been formally researched and published specifically for the sport of alpine ski racing, making it both unique and a cornerstone to the discipline. Backed by cutting edge research, the book provides practical guidance on preparing athletes for high performance and understanding the core tenets of sports science underpinning it, striking a balance between the complex theoretical and practical components coaches and athletes must prepare for in alpine ski racing. Accessibly written and featuring contributions from world leading experts, The Science of Alpine Ski Racing covers key topics of health, training, and high performance in the sport and will be vital reading for youth coaches, professional ski instructors, strength and conditioning coaches, and sports science staff associated with winter sports programs, as well as applied researchers looking for a model to apply to other sports.
