

## Particle statistics

In a famous series of calculations published in Klug and Alexander it was calculated that IF a powder was crushed to 1 micron in size, the amount of powder in a large cavity mount, would be barely sufficient to achieve 1% reproducibility in intensity.

This calculation assumed a single point detector having a small detection volume which in this example, at 1 micron, would detect 38,000 out of 38 billion particles in the sampling volume. Notice the dramatic increase in available particles as the size is decreased.

## How many particles do you need for 1% accuracy in intensity

	<u>40<math>\mu</math>m</u>	<u>10<math>\mu</math>m</u>	<u>1<math>\mu</math>m</u>
# diffraction particles	12	760	38000

To achieve 1% accuracy

$$\sigma = \sqrt{n}/n$$

$$\text{Std. err.} = 2.3 \sigma < 1\%$$

$$n > 52,900 \leftarrow$$

J. Adrian,Jerry Westerweel,2011 Particle image velocimetry or PIV refers to a class of methods used in experimental fluid mechanics to determine instantaneous fields of the vector velocity by measuring the displacements of numerous fine particles that accurately follow the motion of the fluid Although the concept of measuring particle displacements is simple in essence the factors that need to be addressed to design and implement PIV systems that achieve reliable accurate and fast measurements and to interpret the results are surprisingly numerous The aim of this book is to analyze and explain them comprehensively      **Aerosol Technology In Hazard Evaluation** Thomas Mercer,2012-12-02 Aerosol Technology in

Hazard Evaluation is the fifth in the series of books on the subject of aerosol technology This series is organized into nine chapters that cover the properties sampling and respirable activity of aerosol After briefly describing the nature of an inhalation hazard the book examines the properties measurement and significance of geometric diameters of aerosols as well as the shape factors relating them to various particulate properties The mathematical description of size distributions and the statistics of sampling from a lognormal distribution of particle sizes are provided Considerable chapters deal with the methods of aerosol concentration measurement and geometric and aerodynamic size sampling Operating characteristics of respirable aerosol activity samplers and their limitations are also examined The concluding chapter discusses problems in the production flow measurement apparatus calibration and isokinetic sampling of aerosols This series will provide a convenient source of information to those concerned in industrial hygiene and will stimulate the interest of those involved in all phases of environmental health      **Surface Area Determination** D.
