Mohamed, 1990-06 **ECOOP '88 European Conference on Object-Oriented Programming** Stein Gjessing, Kristen Nygaard, 2007-03-11 object oriented seems to be becoming in the 1980s what structured programming was in the 1970s Brian Randell and Pete Lee This quotation is from the invitation to the annual Newcastle University Conference on Main Trends in Computing September 1988 It seems to capture the situation quite well only that the object orientation is being materialised in languages and language constructs as well as in the style of programming and as a perspective upon the task considered The second European Conference on Object Oriented Programming ECOOP 88 was held in Oslo Norway August

15 17 1988 in the city where object oriented programming was born more than 20 years ago when the Simula language appeared The objectives of ECOOP 88 were to present the best international work in the field of object oriented programming to interested participants from industry and academia and to be a forum for the exchange of ideas and the growth of professional relationships

Building Interactive Systems Philip Gray,Roger Took,2013-03-09 Architectures and tools are two important considerations in the construction of interactive computer systems The former is concerned with the optimal structural organisation of systems and the latter with the effective support of the design and management of user interfaces They are regarded as the areas of research most likely to contribute to the development of existing interactive systems in particular by providing improved architectures capable of supporting new styles of interaction and more sophisticated software tools to improve productivity This volume combines the proceedings of two workshops held in York and Glasgow which concentrated on architectures and tools respectively In doing so it addresses the problems of user interface construction from two complementary viewpoints and provides alternative perspectives on many of the central issues Some of the papers are published in expanded form to provide a more comprehensive coverage of the topics and two additional papers have been included which offer a useful insight into issues raised by the workshops The papers address formal and theoretical concerns as well as academic and commercial ones Specific topics covered include novel input models architectures for real time systems and object oriented user interface tools for X widgets NeWS and Smalltalk based applications The papers also include presentations of new tools and architectural designs Building Interactive Systems Architectures and Tools provides the most extensive recent account of research into the relationship between architectures and tools in the construction of interactive computer systems and will be of interest to researchers postgraduate students and software developers

Jacob,H. Raghav Rao,2012-12-06 Business modelling is a vast arena of research and practice which is gaining increasing importance in the rapid development of e commerce globalization and in particular the movement toward global e business The ability to utilize advanced computing technology to model analyse and simulate various aspects of ever changing businesses has made a significant impact on the way businesses are designed and run these days With the current global e business and e commerce initiatives it has become important that all businesses carefully validate their business objectives requirements and strategies through a careful process of formal business modelling It is important for effective enterprise decision making to have clear concise business models that allow the extraction of critical value from business processes and specify the rules to be globally enforced Particularly in e business specifications the need to be unambiguous accurate and complete becomes even greater because there may be no human mediator or agent to rely on in complex or unforeseen situations Business Modelling Multidisciplinary Approaches Economics Operational and Information Systems Perspectives arranged in three parts brings scholarly perspectives from various disciplines to bear on some of the critical aspects of business modeling The first part chapters 1 8 focuses on business modelling fundamentals and starts with a series of economics and operations research perspectives The second part chapters 9 19 concentrates on modelling in electronic businesses and focuses on Management Information Systems and Decision Support Systems The third part chapters 20 22 centers on multidisciplinary business modelling progress in particular on the seminal work of Professor Andrew B Whinston *COBOL From Pascal* A.J. Tyrrell,1989-06-18 This book is concerned with language skills and language understanding rather than programming methodology No mention is made of testing and no attention given to the environment in which programs must be entered or executed It is assumed that a reader will be familiar with these matters User Interfaces for All Constantine
