living in digitality a cultural condition whereby users engage with technology at every moment of every day Using extensive fieldwork at smart homes throughout the USA Woods traces how smart homes urge ubiquitous computing as a normalized daily practice readying domestic spaces and their occupants for an increasingly transactional digital future that is largely controlled by corporate interests Threshold advances knowledge in three ways by 1 Offering definitional tools for identifying and evaluating immersive technologies including but not limited to the smart home 2 Identifying three distinct configurations of the smart home according to their domestic and technological functions 3 Demonstrating the productive capacity of smart homes and smart devices to influence social life The book highlights the rhetorical force of smart domesticity for rhetorical scholars digital humanists political scientists critical theorists policy makers and residents or prospective residents of smart homes Ultimately Threshold serves as a toolkit for recognizing and responding to the persistent encroachment of digital technologies in all parts of our lives *Current State of Art in Artificial Intelligence and Ubiquitous Cities* Rita Yi Man Li, Kwong Wing Chau, Daniel Chi Wing Ho, 2022-05-14 This book covers artificial intelligence and ubiquitous cities It discusses the applications of the relevant tools in bringing revolutionary new lives to mankind It showcases various applications of artificial intelligence in benefiting human society For example AI classification shortens the human time required for classifying court cases humanoid robots help us perform heavy duty jobs like humans connect all the smart home devices and take care of the kids and the elderly It also presents the application of AutoML to predict housing prices
