Smart Polymers for Bioseparation and Bioprocessing Igor Galaev,Bo Mattiasson,2001-11-15 Smart polymers are macromolecules capable of undergoing rapid reversible phase transitions from a hydrophilic to a hydrophobic microstructure when triggered by small changes in their immediate environment such as slight variations in temperature pH or ionic strength Until now it has always been considered that polymers are passive participants within the Bioseparation procedure Smart Polymers for Bioseparation and Bioprocessing addresses an entirely novel theory that advocates a much more active role for smart polymers within this process than has previously been envisaged and therefore focuses on the role of these smart polymers within bioseparation With contributions from the leading researchers working on smart polymers and their applications this volume offers a comprehensive overview of both the current state of affairs within this research field and the potential for future developments This book will be of interest to those working on techniques of bioseparation and bioprocessing polymer chemists developing new smart polymers as well as graduates in biotechnology

Fundamentals of Modern Bioprocessing

Sarfaraz K. Niazi, Justin L. Brown, 2017-07-27 Biological drug and vaccine manufacturing has quickly become one of the highest value fields of bioprocess engineering and many bioprocess engineers are now finding job opportunities that have traditionally gone to chemical engineers. *Fundamentals of Modern Bioprocessing* addresses this growing demand. Written by experts well established in the field, this book connects the principles and applications of bioprocessing engineering to healthcare product manufacturing and expands on areas of opportunity for qualified bioprocess engineers and students. The book is divided into two sections: the first half centers on the engineering fundamentals of bioprocessing while the second half serves as a handbook offering advice and practical applications. Focused on the fundamental principles at the core of this discipline, this work outlines every facet of design, component selection, and regulatory concerns. It discusses the purpose of bioprocessing to produce products suitable for human use, describes the manufacturing technologies related to bioprocessing, and explores the rapid expansion of bioprocess engineering applications relevant to health care product manufacturing. It also considers the future of bioprocessing, the use of disposable components, which is the fastest growing area in the field of bioprocessing to replace traditional stainless steel. In addition, this text discusses the many types of genetically modified organisms, outlines laboratory techniques, includes the most recent developments, serves as a reference, and contains an extensive bibliography. Emphasizes biological manufacturing using recombinant processing, which begins with creating a genetically modified organism using recombinant techniques. *Fundamentals of Modern Bioprocessing* outlines both the principles and applications of bioprocessing engineering related to healthcare product manufacturing. It lays out the basic concepts, definitions, methods, and applications of bioprocessing. A single volume comprehensive reference developed to meet the needs of students with a bioprocessing background, it can also be used as a source for professionals in the field.

Natural-Based Polymers for Biomedical Applications Rui L. Reis, Nuno M. Neves, Joao F. Mano, Manuela E.

Gomes, Alexandra P. Marques, Helena S. Azevedo, 2008-08-15 Polymers from natural sources are particularly useful as biomaterials and in regenerative medicine given their similarity to the extracellular matrix and other polymers in the human body. This important book reviews the wealth of research on both tried and promising new natural based biomedical polymers together with their applications as implantable biomaterials, controlled release carriers, or scaffolds for tissue engineering. The first part of the book reviews the sources, processing, and properties of natural based polymers for biomedical applications. Part two describes how the surfaces of polymer based biomaterials can be modified to improve their functionality. The third part of the book discusses the use of natural based polymers for biodegradable scaffolds and hydrogels in tissue engineering. Building on this foundation, Part four looks at the particular use of natural gelling polymers for encapsulation, tissue engineering, and regenerative medicine. The penultimate group of chapters reviews the use of natural based polymers as delivery systems for drugs, hormones, enzymes, and growth factors. The final part of the book summarises
