The First World War was the first conflict in history to be fought in the air as well as on land and at sea Britain's fledgling air arms the Royal Flying Corps and the Royal Naval Air Service developed a methodology for aerial combat from scratch devising tactics and improving weaponry as they went From them in 1918 the RAF was born The first combat pilots were considered then as now to be heroes untainted by the squalor of the war in the trenches Yet no pilot could even take off let alone score combat victories without the support of mechanics riggers and armourers to name but a few of those on the ground The Airman's War examines the experiences of all British flying service personnel from Air Mechanic to Squadron Commander in fixed wing aircraft balloons and airships from air fields and from aircraft carriers Using long forgotten personal accounts it contrasts these experiences with those of the opposing air services on the Western Front in the defence of Britain and in the Aegean and Mediterranean theatres With evocative images some never before published it presents a commanding overview of a subject which continues to inspire fascination among each subsequent generation

*Sir Frederick Sykes and the Air Revolution 1912-1918* Lieutenant-Colonel Eric Ash, 2012-10-12 This is a long overdue study of Sir Frederick H Sykes Chief of the Air Staff of Britain's Royal Air Force RAF during the First World War Historians for the most part have either overlooked Sykes or misinterpreted him leaving a gap in the story of British flying Contrary to previous images of Sykes we now see that he was not a secretive intriguer or a tangential subject in RAF history Rather he played a fundamental part in organizing and leading British aviation from 1912 to the end of 1918 He provided organization visionary guidance and efficient administrative control for the fledgling service that tried to survive infancy in the heat of battle

**Battle For Air Supremacy Over The Somme: 1 June-30 November 1916** Lt-Col Thomas G.

Bradbeer,2014-08-15 Much has been written about the Battle of the Somme From July through late November 1916 British French and German armies fought one of the costliest battles of the twentieth century Well over a million casualties and only a few miles of ground gained by the Allies were the result when the battle ended Little however has been written about the second battle which occurred simultaneously this one in the skies above the Somme where for the first time in the history of warfare a deliberate attempt was made to control the sky The British Royal Flying Corps under the resolute command of General Sir Hugh Trenchard fought to gain air supremacy from the German Air Service Trenchard believed that the best way to support the ground force was to dominate and control the sky above the battlefield This air campaign was critical because of its impact on the doctrine and theory of air warfare which followed it This study examines the efforts of the Royal Flying Corps to gain air supremacy against the German Air Service before and during the Battle of the Somme

**MacArthur's Airman** Thomas E. Griffith, Jr.,2017-01-20 A fighter pilot who flew 75 combat missions in World War I George C Kenney was a charismatic leader who established himself as an innovative advocate of air power As General MacArthur's air commander in the Southwest Pacific during World War II Kenney played a pivotal role in the conduct of the war but until now his performance has remained largely unexplored Thomas Griffith offers a critical assessment of Kenney's numerous contributions to MacArthur's war efforts He depicts Kenney as a staunch proponent of

airpower's ability to shape the outcome of military engagements and a commander who shared MacArthur's strategic vision. He tells how Kenney played a key role in campaigns from New Guinea to the Philippines, adapted aircraft pilots' doctrine and technology to the demands of aerial warfare in the southwest Pacific and pursued daring strategies that likely would have failed in the European theater. Kenney is shown to have been an operational and organizational innovator who was willing to scrap doctrine when the situation called for ingenuity, such as shifting to low level attacks for more effective bombing raids. Griffith tells how Kenney established air superiority in every engagement, provided close air support for troops by bombing enemy supply lines, attacked and destroyed Japanese supply ships, and carried out rapid deployment by airlifting troops and supplies. Griffith draws on Kenney's diary and correspondence, the personal papers of other officers, and previously untapped sources to present a comprehensive portrayal of both the officer and the man. He illuminates Kenney's relationship with MacArthur, General Hap Arnold, and other field commanders, and closely examines factors in air warfare often neglected in other accounts, such as intelligence training and logistical support. MacArthur's Airman is a rich and insightful study that shows how air, ground, and marine efforts were integrated to achieve major strategic objectives. It firmly establishes the importance of MacArthur's campaign in New Guinea and reveals Kenney's instrumental role in turning the tide against the Japanese. *Air University Library Index to Military Periodicals*, 1999 [A Companion to World War I](#) John

Horne, 2011-11-23 *A Companion to the First World War* brings together an international team of distinguished historians who provide a series of original and thought provoking essays on one of the most devastating events in modern history. Comprises 38 essays by leading scholars who analyze the current state of historical scholarship on the First World War. Provides extensive coverage spanning the pre-war period, the military conflict, social, economic, political, and cultural developments, and the war's legacy. Offers original perspectives on themes as diverse as strategy and tactics, war crimes, science and technology, and the arts. Selected as a 2011 Outstanding Academic Title by CHOICE. *Air and Sea Power in World War I* Maryam Philpott, 2013-05-30 The Great War tore the fabric of Europe apart, killing over 35 million men and challenging the notion of heroism in war. *Air and Sea Power in World War I* focuses on the experience of World War I from the perspective of British pilots and sailors themselves, to demonstrate that the army-centric view of war studies has been too limited. The Royal Flying Corps, created in 1912, adapted quickly to the needs of modern warfare, driven by the enthusiasm of its men. In contrast, the lack of modernisation in the Royal Navy, despite the unveiling of HMS Dreadnought in 1906, undermined Britain's dominance of the seas. By considering five key aspects of the war experience, this book analyses how motivation was created and sustained. What training did men receive and how effectively did this prepare them for roles that were predominantly non-combative? How was motivation affected by their individual relationship with weaponry, development, and how different was defensive service on the Home Front when in close proximity to ordinary civilian life? Finally, *Air and Sea Power in World War I* looks at the changing reputation of the services during and after the conflict and the extent to which these notions were

created by the memoirs of pilots and sailors Featuring new primary source material including the journals of service men themselves this book will be essential reading for students and scholars of World War I and of Naval Aviation and Military History     *Training to Fly* Rebecca Hancock Cameron,1999 Military Flight training 1907 1945
